

## Circuit Description

1. When press down Power Key about 1s, the PMU will be opened and will give relation Power to MCU,MCU will work now
2. the MCU will active from Eboot step by step, the LCM will show on soon
3. After system full function,LCM touch panel can be active, then relation application will be showed on the LCD can be used
4. Can store or open file from Nandflash
5. TMC function can be used when the MAP have TMC relation protocol
6. GPS can get GPS signal from its special antenna, and exchange data with MCU by UART.
7. Bluetooth can work freely which audio path through codec, this audio codec integrated echo canceller
