The listed attachments are an integral part of this report.

# 1. Summary of test results

**The test results apply exclusively to the test samples as presented in this Report. The CETECOM GmbH does not assume responsibility for any conclusions and generalizations taken in conjunction with other specimens or samples of the type of the item presented to tests. Also we refer on special conditions which the applicant should fulfill according §2.927 to §2.948, special focus regarding modification of the equipment and availability of sample equipment for market surveillance tests.**

The presented Equipment Under Test (in this report, hereinafter referred as EUT) supports radiofrequency technologies with WLAN technology and operating frequency range at 2.412 to 2.462 GHz according to IEE 802.11 b/g/n. The EUT integrates a WLAN transmitter. Other implemented wireless technologies were not considered within this test report.

Following test cases have been performed to show compliance with valid Part 15.207/15.209/15.247 of the FCC CFR Title 47 Rules, Edition 2017 and ISED RSS-247 Issue 2/RSS-Gen Issue 5 standards.

## 1.1. Tests measurement overview according of US CFR Title 47, Subpart 15C and Canada RSS-Standards:

| Test cases | Port | References & Limits | | | EUT set-up | EUT opera - ting mode | Result |
|---|---|---|---|---|---|---|---|
| | | FCC Standard | RSS Section | Test Limit | | | |
| TX-Mode | | | | | | | |
| Timing of transmitter (pulsed operation) | Antenna Terminal or enclosure | §15.35 | RSS-Gen, Issue 5, Chapter 8.2 | -- | -- | -- | for Information only |
| 6 dB bandwidth | Antenna terminal (conducted) | §15.247(a)(2) | RSS-247, Issue 2 Chapter 5.2 b | ≥ 500 kHz for DTS systems | 2 | 1 | Pass |

## 3.2. IEEE 802.11 overview: modulation and data rates

The modulations and data rates defined for 802.11 b/g/n transmitters are identified in the table below. Also it shows which operational mode is possible for the device under test (EUT) according applicant's information.

| 802.11**b**-Mode (DSSS System) | | |
|---|---|---|
| Data rate [MBps] | Modulation type | Supported by EUT |
| 1 | DBPSK (Differential binary phase shift keying) | YES |
| 2 | DQPSK (Differential quadrature phase shift keying) | YES |
| 5.5 / 11 | CCK/PBCC (8-chip complementary code keying) | YES |
| 22 | ERP-PBCC (Packet binary convolutional coding) | NO |

| 802.11**g**-Mode (OFDM system) | | |
|---|---|---|
| Brutto data rate [MBps] | Modulation type of subcarriers | Supported by EUT |
| 6 / 9 | BPSK | YES |
| 12 /18 | QPSK | YES |
| 24 / 36 | 16-QAM | YES |
| 48 / 54 | 64-QAM | YES |

Remark: 52 sub-carriers which can be modulated at different data-rates.

| 802.11**n**-Mode (OFDM) | | |
|---|---|---|
| Brutto data rate [MBps] | Modulation type | Supported by EUT |
| 7.2/14.4/21.7/28.9/43.3/57.8/65/72.2 Mbps | HT20 (MCS0..MCS7) | YES |
| 14.444/28.889/43.333/57.778/86.667/ 115.556/130/144.444 Mbps | HT20 (MCS8..MCS7) | NO |
| 15/30/45/60/90/120/135/150 Mbps | HT40 (MCS0..MCS7) | YES |
| 30/60/90/120/180/240/270/300 Mbps | HT40 (MCS8..MCS15) | NO |

Comments: For additional details please refer to "A-IVI_Scope2_TechnicalPassport_0706207"

## 3.3. EUT: Type, S/N etc. and short descriptions used in this test report

| Short descrip-tion*) | EUT | Type | S/N serial number | HW hardware status | SW software status |
|---|---|---|---|---|---|
| **EUT A S06** | AIVIV20 | Navigationsystem with WLAN and Bluetooth | 0005021 | Version D | 283C37820R |
| **EUT B S04** | AIVIV20 | Navigationsystem with WLAN and Bluetooth | 0005013 | Version D | 283C37820R |

*) EUT short description is used to simplify the identification of the EUT in this test report.

## 3.4. EUT: Type, S/N etc. and short descriptions used in this test report

3.4.1. Auxiliary Equipment (AE): Type, S/N etc. and short descriptions

| AE short descrip-tion *) | Auxiliary Equipment | Type | S/N serial number | HW hardware status | SW software status |
|---|---|---|---|---|---|
| AE 1 | USB-cable (Dongle) | 0,38m | S7291GC000379 | Version-D1 | -- |
| AE 2 | Harness | Test Cable | -- | -- | -- |
| AE 3 | Notebook | Lenovo X200S | LVZT1DG | -- | -- |

*) AE short description is used to simplify the identification of the auxiliary equipment in this test report.

## 3.5. EUT set-ups

| EUT set-up no.*) | Combination of EUT and AE | Remarks |
|---|---|---|
| set. 1 | EUT A + AE 1 + AE 2 | Radiated measurement set-up |
| set. 2 | EUT B + AE 1 + AE 2 | Conducted measurement set-up |

EUT set-up no. is used to simplify the identification of the EUT set-up in this test report.

## 3.6. EUT operating modes

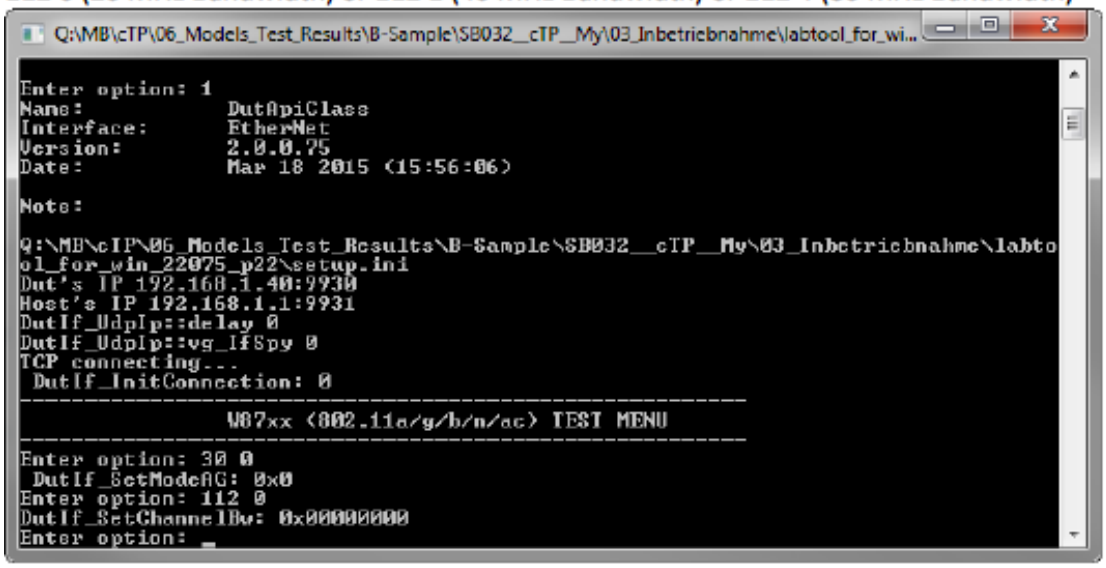
| EUT operating mode no.*1) | Description of operating modes | Additional information |
|---|---|---|
| op. 1 | TX-Mode Burst 20MHz | With help of special test firmware WLAN is switched to a bandwidth of 20MHz and a continuous traffic mode in burst mode (duty cycle >98%) was set-up *2) |
| op. 2 | TX-Mode Burst 40MHz | With help of special test firmware WLAN is switched to a bandwidth of 40MHz and a continuous traffic mode in burst mode (duty cycle >98%) was set-up *2) |

*1) EUT operating mode no. is used to simplify the test report.
*2) Please refer to document Instructions_RadioTypeApproval_9_6_2017 “Instructions for setting Operating Modes of WLAN, BT and BT-LE for Radio Type Approval.”

**3.6.1. Test tool information**
Labtool version: 2.0.0.75
Labtool date: Mar 18 2015 (15:56:06)

The following settings have been done under SW Labtool:

Make the main settings which only have to be set once (per session):
30 0 (Choose the 2,4G band) or 30 1 (Choose the 5G band)
112 0 (20 MHz Bandwidth) or 112 1 (40 MHz Bandwidth) or 112 4 (80 MHz Bandwidth)



Now the parameters for Channel, Power level and modulation group has to be done:
22 1 14 0

For 802.11b the Power level is always 14 and the modulation group is 0
For 802.11g the Power level is always 11 and the modulation group is 1
For 802.11n (2,4GHz) the Power level is always 11 and the modulation group is 1
For 802.11n (5GHz) the Power level is always 10 and the modulation group is 1
For 802.11a the Power level is always 10 and the modulation group is 1
For 802.11ac the Power level is always 6 and the modulation group is 1

If a continuous burst is required use instead of the command 25 the command 17:

17 1 4

```
Enter option: 17 1 4
 DutIf_SetTxDataRate: 0x00000000
        TRPC ID: 2
 DutIf_SetTxContMode: 0x00000000
Enter option:
```

11b

| ID | DataRate |
|---|---|
| 1 | 1M |
| 2 | 2M |
| 3 | 5.5M |
| 4 | 11M |
| | |
| | |
| | |
| | |
| | |
| | |

11g/a

| ID | DataRate |
|---|---|
| 6 | 6M |
| 7 | 9M |

| 108 | VHT_SS1_MCS7 |
| 109 | VHT_SS1_MCS8 |
| 110 | VHT_SS1_MCS9 |

In order to stop the TX:

17 0

```
Enter option: 17 0
 DutIf_SetTxContMode: 0x00000000
Enter option:
```

## 3.7. Worst case identification

The following WLAN modes were used for testing

| WLAN Mode | Data Rate |
|---|---|
| 802.11b | 2Mbit |
| 802.11g | 12Mbit |
| 802.11n, 20MHz bandwidth | MCS0 |
| 802.11n, 40MHz bandwidth | MCS0 |

# 4. Description of test system set-up's

## 4.1. Test system set-up for conducted measurements on antenna port

**Conducted Set-up W1**

| W-LAN conducted RF-Setup 1 (W1 Set-up) | |
|---|---|
| **General description:** | The EUT's RF-signal is coupled out by a suitable antenna coupling connector (1). The signal is first attenuated (2) then connected to the power meter (3) for conducted power measurements. The specific attenuation loss is determined prior to the measurement within a set-up attenuation measurement. These are then taken into account by correcting the measurement readings. |
| **Schematic:** |  |
| **Testing method:** | ANSI C63.10:2013, KDB 558074 D01 DTS Meas.Guidance v04 |

| **Used Equipment** | Passive Elements | Test Equipment | Remark: |
|---|---|---|---|
| | ☒ 20 dB Attenuator<br>☒ Low loss RF-cables<br>☒ | ☒ Power Meter<br>☒ DC-Power Supply<br>☒ Spectrum-Analyser | See List of equipment under each test case and chapter 8 for calibration info |

| **Measurement uncertainty** | See chapter 5.10 |
|---|---|

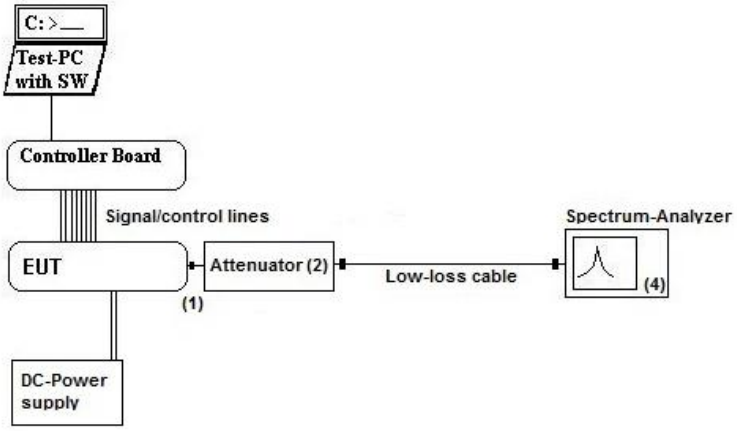
**Conducted Set-up W2**

**W-LAN conducted RF-Setup 2 (W2 Set-up)**

**General description:**

The EUT's RF-signal is coupled out by a suitable antenna coupling connector (1). The signal is first attenuated (2) then connected to spectrum-analyzer (4) for RF-conducted measurements. The specific attenuation loss is determined prior to the measurement within a set-up attenuation measurement. These are then taken into account by correcting the measurement readings of the spectrum-analyzer.

**Schematic:**



**Testing method:** ANSI C63.10:2013, KDB 558074 D01 DTS Meas.Guidance v04

**Used Equipment**

| Passive Elements | Test Equipment | Remark: |
|---|---|---|
| ☒ 20 dB Attenuator<br>☒ Low loss RF-cables | ☒ Power Meter<br>☒ DC-Power Supply<br>☒ Spectrum-Analyser | See List of equipment under each test case and chapter 8 for calibration info |

**Measurement uncertainty** See chapter 5.10

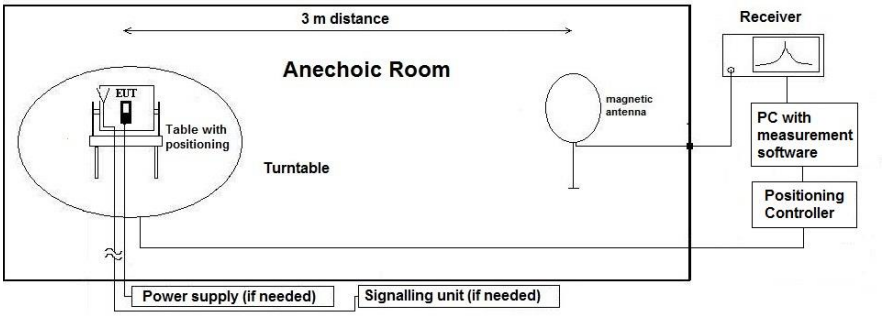
## 4.2. Test system set-up for radiated magnetic field measurements below 30 MHz

**Specification:** ANSI C63.10-2013 chapter 6.4 (§6.4.4.2)

**General Description:** Evaluating the radiated field emissions are done first by an exploratory emission measurement and a final measurement for most critical frequencies determined.

The loop antenna was placed at 1 m height above ground plane and 3 m measurement distance from set-up for investigations. Because of reduced measurement distance, correction data were applied, as stated in chapter "General Limit - Radiated field strength emissions below 30 MHz". The tests are performed in the semi anechoic room recognized by the regulatory commission.

**Schematic:**



**Testing method:**

**Exploratory, preliminary measurement**
The EUT and it's associated accessories are placed on a non-conductive position manipulator (tipping device) of 0.8 m height which is placed on the turntable. By rotating the turntable (step 90°, range 0°to 360°) and the EUT itself either on 3-orthogonal axis (portable equipment) or 2-orthogonal axis (defined operational position of EUT), the emission spectrum was recorded. The loop antenna was moved at least to 2-perpendicular axes (antenna vector in direction of EUT and parallel to EUT) in order to maximize the emissions. The results are documented in a diagram. Critical frequencies (low margin to limit) are saved within a data reduction table for further investigations. If various operating modes are supported, further investigations are made to find the worst-case. Also the interconnection cables and equipment position were varied in order to maximize the emissions.

**Final measurement on critical frequencies**
Based on the exploratory measurements, the most critical frequencies are re-measured by maintaining the EUT's worst-case operation mode, cable position, etc.

First a frequency zoom around the critical frequency is done to locate the frequency more precisely. After this step, for all identified critical frequencies, the maximum peak was determined.

Following parameters were varied: the turntable angle continuously in the range 0 to 360 degree, the EUT itself either over 3-orthogonal axis (not defined usage position) or 2-orthogonal axis (defined usage position).

On the determined worst-case position, a final measurement with necessary bandwidth and detector according standard has been carried out.

**Formula:**

$E_C = E_R + AF + C_L + D_F - G_A$

$M = L_T - E_C$

AF =Antenna factor
$C_L$ = Cable loss
$D_F$= Distance correction factor
$E_C$ = Electrical field – corrected value
$E_R$ = Receiver reading
$G_A$= Gain of pre-amplifier (if used)
$L_T$ = Limit
M = Margin

All units are dB-units, positive margin means value is below limit.

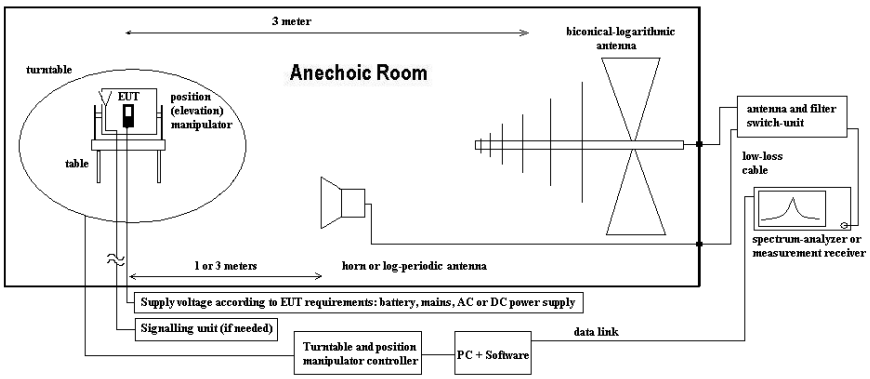
**Distance correction:** Reference for applied correction (extrapolating) factors due to reduced measurement distance:
ANSI C63.10:2013, §6.4.4.2 - Equations (2) + (3) + (4)

## 4.3. Test system set-up for radiated electric field measurement 30 MHz to 1 GHz

**Specification:** ANSI C63.4-2014 chapter 8.2.3, ANSI C63.10-2013 chapter 6.5

**General Description:** Evaluating the field emissions have to be done first by an exploratory emissions measurement and a final measurement for most critical frequencies. The tests are performed in a NSA-compliant semi anechoic room (SAR) recognized by the regulatory commissions.

**Schematic:**



**Testing method:**

**Exploratory, preliminary measurements**
The EUT and its associated accessories are placed on a non-conductive position manipulator (tipping device) of 0.8 m height which is placed on the turntable. By rotating the turntable (range 0° to 360°, step 90°) and the EUT itself either on 3-orthogonal axis (portable equipment) or 2-orthogonal axis (defined operational position of EUT) the emission spectrum and it's characteristics was recorded with an EMI-receiver, broadband antenna and software.

Measurement antenna: horizontal and vertical, heights: 1,0 m and 1,82 m as worst-case determined by an exploratory emission measurements. The results are documented in a diagram. Critical frequencies (low margin to limit) are saved within a table for further investigations. If various operating modes are supported, further investigations are made to find the worst-case of them. Also the interconnection cables and equipment position were varied in order to maximize the emissions.

**Final measurement on critical frequencies**
Based on the exploratory measurements, the most critical frequencies are re-measured by maintaining the EUT's worst-case operation mode, cable position, etc. either on 10m OATS or 3m semi-anechoic room.

First a frequency zoom around the critical frequency is done to locate the frequency more precisely. After this step, for all identified critical frequencies, the maximum peak was determined.

Following parameters were varied: the turntable angle continuously in the range 0 to 360 degree, the EUT itself either over 3-orthogonal axis (not defined usage position) or 2-orthogonal axis (defined usage position). The measurement antenna height between 1 m and 4 m.

On the determined worst-case position, a final measurement with necessary bandwidth and detector according standard has been carried out.

**Formula:**

$E_C = E_R + AF + C_L + D_F - G_A$ (1)

$M = L_T - E_C$ (2)

AF = Antenna factor
$C_L$ = Cable loss
$D_F$ = Distance correction factor (if used)
$E_C$ = Electrical field – corrected value
$E_R$ = Receiver reading
$G_A$ = Gain of pre-amplifier (if used)
$L_T$ = Limit
M = Margin

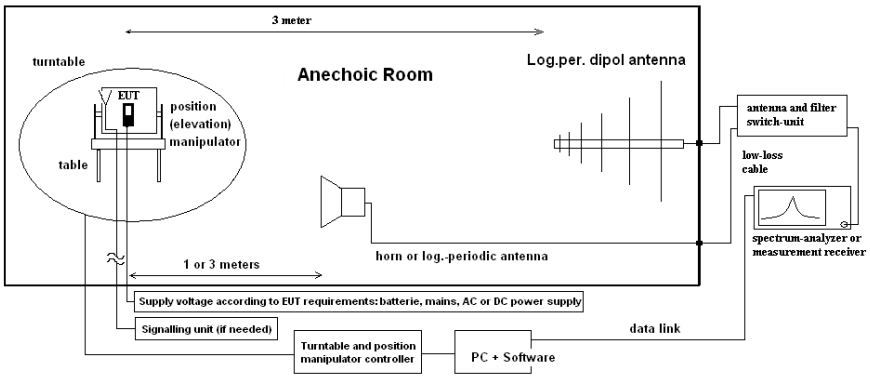
All units are dB-units, positive margin means value is below limit.

## 4.4. Test system set-up for radiated electric field measurement above 1 GHz

**Specification:** ANSI C63.4-2014 chapter 8.3, ANSI C63.10-2013 chapter 6.6.3.3 & 6.6.4

**General Description:** Evaluating the emissions have to be done first by an exploratory emissions measurement and a final measurement for most critical frequencies. The tests are performed in a CISPR 18-1-4:2010 compliant fully anechoic room (FAR) recognized by the regulatory commission. The measurement distance was set to 3 meter for frequencies up to 18 GHz and 2 meter above 18 GHz. A logarithmic periodic antenna is used for the frequency range 30 MHz to 1 GHz. Horn antennas are used for frequency range 1 GHz to 40 GHz. The EUT is aligned within 3 dB beam width of the measurement antenna with three orthogonal axis measurements on the EUT.

**Schematic:**



**Testing method:**

**Exploratory, preliminary measurements**
The EUT and its associated accessories are placed on a non-conductive position manipulator (tipping device) of 1.55 m height which is placed on the turntable. By rotating the turntable (range 0° to 360°, step 15°) and the EUT itself either on 3-orthogonal axis (portable equipment) or 2-orthogonal axis (defined operational position of EUT) the emission spectrum and it's characteristics was recorded with an EMI-receiver, broadband antenna and software.
The measurements are performed in horizontal and vertical polarization of the measurement antennas. The results are documented in a diagram. Critical frequencies (low margin to limit) are saved within a table for further investigations. If various operating modes are supported, further investigations are made to find the worst-case of them. Also the interconnection cables and equipment position were varied in order to maximize the emissions.

**Final measurement on critical frequencies**
Based on the exploratory measurements, the most critical frequencies are re-measured by maintaining the EUT's worst-case operation mode, cable position, etc.

First a frequency zoom around the critical frequency is done to locate the frequency more precisely. After this step, for all identified critical frequencies, the maximum peak was determined. Following parameters were varied: the turntable angle continuously in the range 0 to 360 degree, the EUT itself over 3-orthogonal axis and the height for EUT with large dimensions.

On the determined worst-case position, a final measurement with necessary bandwidth and detector according standard has been carried out.
On the determined worst-case position, a final measurement with necessary bandwidth and detector according standard has been carried out.

**Formula:**

$E_C = E_R + AF + C_L + D_F - G_A$ (1)

$M = L_T - E_C$ (2)

$E_C$ = Electrical field – corrected value
$E_R$ = Receiver reading
M = Margin
$L_T$ = Limit
AF = Antenna factor
$C_L$ = Cable loss
$D_F$ = Distance correction factor (if used)
$G_A$ = Gain of pre-amplifier (if used)

All units are dB-units, positive margin means value is below limit.

# 5. Measurement results

## 5.1. Duty-Cycle

### 5.1.1. Test location and equipment (for reference numbers please see chapter 'List of test equipment')

| Ambient Climatic conditions | | | Temperature: (22±2)°C | Rel. humidity: (45±15)% | | |

The necessary duty-cycle correction factor is determined on nominal conditions on one channel in each operable frequency-band. It is assumed that no noticeable changes occur when tested on other channels or climatic conditions. The Duty-Cycle was constant, means without variations.

### 5.1.2. Results

☐ The results were corrected in order to evaluate for worst-case result each time when average values are necessary for example average radiated emissions or similar

☒ No correction necessary: Duty-Cycle > 98%

## 5.2. RF-Parameter – 6dB and 99% Occupied Bandwidth

|---|---|
| **FCC** | ☒ §15.247(a)(2), RSS-247, Chapter 5.2(1) |
| **ISED** | ☒ RSS-Gen, Issue5 , Chapter 6.7 |
| **Remark** | The occupied bandwidth, that is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission<br><br>When the occupied bandwidth limit is not stated in the applicable RSS or reference measurement method, the transmitted signal bandwidth shall be reported as the 99% emission bandwidth, as calculated or measured. |

**5.2.3. EUT settings**

For FHSS-systems hopping mode was switched-off so fixed three different channels could be measured. The EUT was instructed to send with maximum power (if adjustable) according applicants instructions. Different modulation characteristics have been checked, e.g. data rates which EUT can operate.

**5.2.4. Measurement method**

The measurement was performed with the RBW set to 30kHz. The span was set to cover the complete carrier. Three carrier frequencies (low/middle/high) were used for showing the compliance with this requirement. A 99% OBW measurement function was used to measure the bandwidth compared 99% of the highest In-Band power. The operating modes have been varied (e.g. data rate, modulation scheme, etc.). The hopping-mode is switched off.

**5.2.5. Spectrum-Analyzer Settings**

| | |
|---|---|
| Span | Set as to fully display the emissions and approximate 20dB below the PEAK level |
| Resolution Bandwidth (RBW) | Set to approx. 1% …3% of the emission width |
| Video Bandwidth (VBW) | 3 times the resolution bandwidth |
| Sweep time | Coupled and low enough to have no gaps within power envelope |
| Detector | Sample (if bin width: Span/no. of frequency points SA < 0.5*RBW SA otherwise Peak detector) |
| Sweep mode | Repetitive Mode, Max hold |

|---|---|
| **FCC** | ☒ §15.247(b) (3) + KDB 558074 D01 DTS Meas Guidance v04 |
| **ISED** | ☒ RSS-247, Chapter 5.4(4) |
| **ANSI** | ☒ ANSI 63.10:2013 |
| **Specification** | *For systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands: 1 Watt. As an alternative to a peak power measurement, compliance with the one Watt limit can be based on a measurement of the maximum conducted output power. Maximum Conducted Output Power is defined as the total transmit power delivered to all antennas and antenna elements averaged across all symbols in the signalling alphabet when the transmitter is operating at its maximum power control level. Power must be summed across all antennas and antenna elements. The average must not include any time intervals during which the transmitter is off or is transmitting at a reduced power level. If multiple modes of operation are possible (e.g., alternative modulation methods), the maximum conducted output power is the highest total transmit power occurring in any mode.* |

**5.3.3. EUT settings:**

The EUT was instructed to send with maximum power (if adjustable) according applicants instructions.
Different modulation characteristics have been checked, e.g. data rates which EUT can operate.

### 5.3.6. RESULTS

**APLICANT'S DECLARED ANTENNA CHARACTERISTICS:**

☒ Directional Gain < 6 dBi (measured: difference between measured conducted and radiated eirp. power)
☐ Directional Gain > 6 dBi (measured / applicant's declaration) -> conducted power reduction necessary

Maximum declared antenna gain [isotropic]: 1.24 dBi

Different modulation types and data rates were tested in order to find the maximum peak conducted output power. **Enclosed are only the maximum values for each modulation format**, pls. compare separate document A1 for all results.

| | |
|---|---|
| **FCC** | ☒ §15.247 (d) |
| **ISED** | ☒ **RSS-247. Issue 2. Chapter 5.5** |
| **Remark** | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated device is operating. the RF power that is produced shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power. based on either an RF conducted or a radiated measurement. provided that the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of root-mean-square averaging over a time interval. as permitted under FCC15.247 paragraph (b)(3) / RSS-247section 5.4(d). the attenuation required shall be 30 dB instead of 20 dB |

**5.5.3. EUT settings**

Fixed Channel Mode:
For FHSS-systems Hopping mode was switched-off so fixed three different channels could be measured.
The EUT was instructed to send with maximum power (if adjustable) according applicants instructions.
Different modulation characteristics have been checked. e.g. data rates which EUT can operate.

Hopping Mode:
For FHSS-systems Hopping mode was switched- ON so emissions from hopping channels could be measured.
The EUT was instructed to send with maximum power (if adjustable) according applicants instructions.
Different modulation characteristics have been checked. e.g. data rates which EUT can operate.

**5.5.4. Measurement Method:**

The measurements were performed with the RBW set to 100kHz & maximum carrier level was indicated with MAX-Hold positive peak detector using markers. Then a frequency line was set 20 dB below this measured maximum carrier level.

Then using RBW 100 kHz & spectrum analyzer span from 150 kHz to 25 GHz in three steps spurious emissions were measured with MAX-Hold positive peak detector.

The sweep time set as long as necessary to capture the full signal burst per hopping channel. The burst on-period is captured by setting appropriate markers in the rising and falling edges.

### 5.5.5. TABLE OF MEASUREMENT RESULTS:

5.5.5.1. Op. Mode: b-Mode

| Set-up no.: 1<br>Op-Mode: 1 | **RF-Conducted test: 20 dBc spurious emissions** | | | | | |
|---|---|---|---|---|---|---|
| Frequency Range | Low channel =1<br>(2412 MHz)<br>Level Reference<br>(In-Band)= 0.98 dBm<br>Limit= -19.02 dBm | | Middle channel = 6<br>(2437 MHz)<br>Level Reference<br>(In-Band) = -- dBm<br>Limit= -- dBm | | High channel = 11<br>(2462MHz)<br>Level Reference<br>(In-Band)= -- dBm<br>Limit= -- dBm | |

**5.6.2. Requirements:**

| | |
|---|---|
| **ISED** | ☒ RSS-Gen, Issue5 , Chapter 6.11 |
| **Remark** | Frequency stability is a measure of frequency drift due to temperature and supply voltage variations, with reference to the frequency measured at an appropriate reference temperature and the rated supply voltage. |

**5.6.3. EUT settings**

For FHSS-systems hopping mode was switched-off so fixed two different channels could be measured.
The EUT was instructed to send with maximum power (if adjustable) according applicants instructions.

**5.6.4. Measurement method**

1. The First Measurement was done at Normal Temperature +20°C and ±15% of the supply voltage.
2. The Second Measurement was done at 3 different Temperatures -20°C (-4°F), +20°C (+68°F) and +50°C (+122°F), and the nominal supply Voltage

3. Also the 99% emission bandwidth was measured. Two markers are placed on frequency points such that left to lower f-marker and right to higher f-marker only 1% of the TX-power is contained. Between the markers, 99% of the power is laying.

**5.6.5. Spectrum-Analyzer Settings**

| | |
|---|---|
| Span | Set as to fully display the emissions and approximate 20dB below the PEAK level |
| Resolution Bandwidth (RBW) | Set to approx. 1% …3% of the emission width |
| Video Bandwidth (VBW) | 3 times the resolution bandwidth |
| Sweep time | Coupled and low enough to have no gaps within power envelope |
| Detector | Sample (if bin width: Span/no. of frequency points SA < 0.5*RBW SA otherwise Peak detector) |
| Sweep mode | Repetitive Mode, Max hold |

### 5.7.4. Measurement Results

The results are presented below in summary form only. For more information please consult the diagrams included in annex 1.

The EUT is put on operation on middle channel only. If critical peaks are found (Margin <10 dB) the lowest and highest channels will be performed too. For more information please see the diagrams.

Table of measurement results:

| Diagram No. | Carrier Channel | | Frequency range | Set-up no. | OP-mode no. | Remark | Used detector | | | Result |
|---|---|---|---|---|---|---|---|---|---|---|
| | Range | No. | | | | | PK | AV | QP | |
| 2.01a | Low | 01 | 9 kHz - 30 MHz | 1 | 1 | b-Mode-1Mbps-CH01-laying | ☒ | ☐ | ☐ | Pass |

| 2.04b | Mid | 06 | 9 kHz - 30 MHz | 1 | 1 | n40-Mode-MCS0-CH06-standing | ☒ | ☐ | ☐ | Pass |

### 5.7.5. Correction factors due to reduced meas. distance (f< 30 MHz)

The used correction factors when the measurement distance is reduced compared to regulatory measurement distance, are calculated according Extrapolation formulas valid for EUT's with maximum dimension of 0.625xLambda. Formula 2+3+4 as presented in ANSI C63.10, Chapter 6.4.4 are used for the calculations of proper extrapolation factors.

| Frequency -Range | f [kHz/MHz] | Lambda [m] | Far-Field Point [m] | Distance Limit accord. 15.209 [m] | 1st Condition (dmeas< $D_{near-field}$) | 2'te Condition (Limit distance bigger $d_{near-field}$) | Distance Correction accord. Formula |

### 5.10.4. Measurement Method

For uncritical results where a measurement resolution bandwidth of 1MHz can clearly show the compliance without influencing the results, a field strength measurement was performed to show compliance.

For critical results a Marker-Delta marker method was used for showing compliance to restricted bands. The method is according ANSI C63.10:2013, Chapter 6.10.6 "Marker-Delta method",. The method consists of three independent steps:

**1. Step:** Prior to the measurement the fundamental radiated In-Band field strength was performed. The determined value is used as reference value.

**2. Step**: Second step consist of finding the relative attenuation between the fundamental emission and the maximum local out-of-band emission (within 2 MHz range around the band edge either on the band-edge directly or some modulation product if the level is greater than that on the band-edge) when measured with lower resolution bandwidth.

**3. Step:** The delta value recorded in step 2 will be subtracted from value recorded in step 1, thus giving the required field strength at the band-edge. This value must fulfil the requirements for radiated spurious emissions in restricted bands in FCC §15.205 with the general limits of FCC §15.209.

### 5.10.5. EUT settings

The EUT was instructed to send with maximum power (if adjustable) according to applicants instructions.

### 5.10.6. Results: for non-restricted bands near-by

#### 5.10.6.1. Non-restricted bands near-by - limits according FCC §15.407 and RSS-247, Issue 1, Chapter 5.5

| Diagramm no. | Channel no. | Restricted band ? | Fundamental Value [dBuV/m] | | Peak-Value at Band-Edge [dBuV/m] | Difference [dB] | Limit [dBc] | Margin [dB] | Verdict | Remark: |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | Peak-Value | Average-Value | | | | | | |
| 9.01 | 1 | no | 99,76 | 91,76 | 54,54 | 45,22 | 20 | 25,22 | PASS | b-mode, PWR-LVL=14 |
| 9.02 | 1 | no | 91,82 | 84,93 | 55,71 | 36,11 | 20 | 16,11 | PASS | g-mode, PWR-LVL=11 |
| 9.01 | 1 | no | 91,89 | 85,59 | 56,38 | 35,51 | 20 | 15,51 | PASS | n20-mode, PWR-LVL=11 |
| 9.02 | 3 | no | 88,33 | 81,86 | 54,90 | 33,43 | 20 | 13,43 | PASS | n40-mode, PWR-LVL=11 |

### 5.10.7. Restricted bands near-by

#### (§15.205 with limits accord. FCC §15.209) and (RSS-Gen, Issue4, Chapter 8.10)

| Diagramm no. | Channel no. | Restricted band ? | Fundamental Value [dBuV/m] | | Value at Band-Edge [dBuV/m] | | Limits [dBuV/m] | | Duty-Cycle Correctio | Margin [dB] | | Verdict | Remark: |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | Peak-Value | Average-Value | Peak -Value | Average -Value | Peak -Value | Average -Value | [dB] | Peak | Average | | |
| 9.03 | 11 | yes | 103,07 | 100,41 | 56,91 | 45,80 | 74 | 54 | 0 | 17,09 | 8,20 | PASS | b-mode, PWR-LVL=14 |
| 9.04 | 11 | yes | 102,22 | 93,82 | 62,48 | 49,89 | 74 | 54 | 0 | 11,52 | 4,11 | PASS | g-mode, PWR-LVL=11 |
| 9.03 | 11 | yes | 102,55 | 93,66 | 66,48 | 51,03 | 74 | 54 | 0 | 7,52 | 2,98 | PASS | n20-mode, PWR-LVL=11 |
| 9.04 | 9 | yes | 97,59 | 88,80 | 64,60 | 50,61 | 74 | 54 | 0 | 9,40 | 3,39 | PASS | n40-mode, PWR-LVL=11 |

Remark : The EUT complies to the band edge requirement under provision that the power level is adjusted to those listed in the table above.

## 5.11. Measurement uncertainties

The reported uncertainties are calculated based on the standard uncertainty multiplied with the appropriate coverage factor **k**, such that a confidence level of approximately 95% is achieved.
For uncertainty determination, each component used in the concrete measurement set-up was taken in account and it's contribution to the overall uncertainty according it's statistical distribution calculated.

Following table shows expectable uncertainties for each measurement type performed.

| RF-Measurement | Reference | Frequency range | Calculated uncertainty based on a confidence level of 95% | | | | | | Remarks |
|---|---|---|---|---|---|---|---|---|---|
| Conducted emissions ($U_{CISPR}$) | CISPR 16-2-1 | 9 kHz - 150 kHz<br>150 kHz - 30 MHz | 4.0 dB<br>3.6 dB | | | | | | - |
| Radiated emissions Enclosure | CISPR 16-2-3 | 30 MHz - 1 GHz<br>1 GHz - 18 GHz | 4.2 dB<br>5.1 dB | | | | | | E-Field |
| Disturbance power | CISPR 16-2-2 | 30 MHz - 300 MHz | - | | | | | | - |
| | | | | | | | | | |
| Power Output radiated | - | 30 MHz - 4 GHz | 3.17 dB | | | | | | Substitution method |
| Power Output conducted | - | Set-up No. | Cel-C1 | Cel-C2 | BT1 | W1 | W2 | -- | |
| | | 9 kHz - 12.75 GHz | N/A | 0.60 | 0.7 | 0.25 | N/A | -- | - |
| | | 12.75 - 26.5GHz | N/A | 0.82 | -- | N/A | N/A | -- | |
| Conducted emissions on RF-port | - | 9 kHz - 2.8 GHz | 0.70 | N/A | 0.70 | N/A | 0.69 | -- | N/A - not applicable |
| | | 2.8 GHz - 12.75GHz | 1.48 | N/A | 1.51 | N/A | 1.43 | -- | |
| | | 12.75 GHz - 18GHz | 1.81 | N/A | 1.83 | N/A | 1.77 | -- | |
| | | 18 GHz - 26.5GHz | 1.83 | N/A | 1.85 | N/A | 1.79 | -- | |
| Occupied bandwidth | - | 9 kHz - 4 GHz | 0.1272 ppm (Delta Marker) | | | | | | Frequency error |
| | | | 1.0 dB | | | | | | Power |
| Emission bandwidth | - | 9 kHz - 4 GHz | 0.1272 ppm (Delta Marker) | | | | | | Frequency error |
| | - | | See above: 0.70 dB | | | | | | Power |
| Frequency stability | - | 9 kHz - 20 GHz | 0.0636 ppm | | | | | | - |
| Radiated emissions Enclosure | - | 150 kHz - 30 MHz<br>30 MHz - 1 GHz<br>1 GHz - 20 GHz | 5.0 dB<br>4.2 dB<br>3.17 dB | | | | | | Magnetic field<br>E-field<br>Substitution |

**Table: measurement uncertainties, valid for conducted/radiated measurements**

# 6. Abbreviations used in this report

| The abbreviations | |
|---|---|
| ANSI | American National Standards Institute |
| AV , AVG, CAV | Average detector |
| EIRP | Equivalent isotropically radiated power, determined within a separate measurement |
| EGPRS | Enhanced General Packet Radio Service |
| EUT | Equipment Under Test |
| FCC | Federal Communications Commission, USA |
| IC | Industry Canada |
| n.a. | not applicable |
| Op-Mode | Operating mode of the equipment |
| PK | Peak |
| RBW | resolution bandwidth |
| RF | Radio frequency |
| RSS | Radio Standards Specification, Dokuments from Industry Canada |
| Rx | Receiver |
| TCH | Traffic channel |
| Tx | Transmitter |
| QP | Quasi peak detector |
| VBW | Video bandwidth |
| ERP | Effective radiated power |

# 7. Accreditation details of CETECOM's laboratories and test sites

| Ref.-No. | Accreditation Certificate | Valid for laboratory area or test site | Accreditation Body |
|---|---|---|---|
| - | D-PL-12047-01-01 | All laboratories and test sites of CETECOM GmbH, Essen | DAkkS, Deutsche Akkreditierungsstelle GmbH |
| 337<br>487<br>558<br>348<br>348 | 736496 | Radiated Measurements 30 MHz to 1 GHz, 3 m / 10 m (OATS)<br>Radiated Measurements 30 MHz to 1 GHz, 3 m (SAR)<br>Radiated Measurements above 1 GHz, 3 m (FAR)<br>Mains Ports Conducted Interference Measurements<br>Telecommunication Ports Conducted Interference Measurem. | FCC, Federal Communications Commission<br>Laboratory Division, USA<br>(MRA US-EU 0003) |
| 337<br>487<br>550<br>558 | 3462D-1<br>3462D-2<br>3462D-2<br>3462D-3 | Radiated Measurements 30 MHz to 1 GHz, 3 m / 10 m (OATS)<br>Radiated Measurements 30 MHz to 1 GHz, 3 m (SAR)<br>Radiated Measurements 1 GHz to 6 GHz, 3 m (SAR)<br>Radiated Measurements above 1 GHz, 3 m (FAR) | IC, Industry Canada Certification and Engineering Bureau |
| 487<br>550<br>348<br>348 | R-2666<br>G-301<br>C-2914<br>T-1967 | Radiated Measurements 30 MHz to 1 GHz, 3 m (SAR)<br>Radiated Measurements 1 GHz to 6 GHz, 3 m (SAR)<br>Mains Ports Conducted Interference Measurements<br>Telecommunication Ports Conducted Interference Measurem. | VCCI, Voluntary Control Council for Interference by Information Technology Equipment, Japan |
| OATS = Open Area Test Site, SAR = Semi Anechoic Room, FAR = Fully Anechoic Room | | | |

# 8. Instruments and Ancillary

The “Ref.-No” in the left column of the following tables allows the clear identification of the laboratory equipment.

## 8.1. Test software and firmware of equipment

| Ref.-No. | Equipment | Type | Serial-No. | Version of Firmware or Software during the test |
|---|---|---|---|---|
| 001 | EMI Test Receiver | ESS | 825132/017 | Firm.= 1.21 , OTP=2.0, GRA=2.0 |
| 012 | Signal Generator (EMS-cond.) | SMY 01 | 839069/027 | Firm.= V 2.02 |
| 013 | Power Meter (EMS cond.) | NRVD | 839111/003 | Firm.= V 1.51 |
| 017 | Digital Radiocommunication Tester | CMD 60 M | 844365/014 | Firmware = V 3.52 .22.01.99, DECT = D2.87 13.01.99 |
| 119 | RT Harmonics Analyzer dig. Flickermeter | B10 | G60547 | Firm.= V 3.1DHG |
| 261 | Thermal Power Sensor | NRV-Z55 | 825083/0008 | EPROM-Datum 02.12.04, SE EE 1 B |
| 262 | Power Meter | NRV-S | 825770/0010 | Firm.= 2.6 |
| 263 | Signal Generator | SMP 04 | 826190/0007 | Firm.=3.21 |
| 295 | Racal Digital Radio Test Set | 6103 | 1572 | UNIT Firmware= 4.04, SW-Main=4.04, SW-BBP=1.04, SW-DSP=1.02, Hardboot=1.02, Softboot=2.02 |

## 8.3. Legend

| Note / remarks | | Calibrated during system calibration: |
|---|---|---|
| | 1a | System CTC-SAR-EMS (Ref.-No. 442) |
| | 1b | System-CTC-EMS-Conducted (Ref.-No. 335) |
| | 1c | System CTC-FAR-EMI-RSE (Ref.-No . 443) |
| | 1d | System CTC-SAR-EMI (Ref.-No . 441) |
| | 1e | System CTC-OATS (EMI radiated) (Ref.-No. 337) |
| | 1 f | System CTC-CTIA-OTA (Ref.-No . 420) |
| | 1 g | System CTC-FAR-EMS (Ref.-No . 444) |
| | 2 | Calibration or equipment check immediately before measurement |
| | 3 | Regulatory maintained equipment for functional check or support purpose |
| | 4 | Ancillary equipment without calibration e.g. mechanical equipment or monitoring equipment |
| | 5 | Test System |

| | | |
|---|---|---|
| Interval of calibration | 12 M | 12 month |
| | 24 M | 24 month |
| | 36 M | 36 month |
| | 24/12 M | Calibration every 24 months, between this every 12 months internal validation |
| | 36/12 M | Calibration every 36 months, between this every 12 months internal validation |
| | Pre-m | Check before starting the measurement |
| | - | Without calibration |

# 9. Versions of test reports (change history)

| Version | Applied changes | Date of release |
|---|---|---|
| -- | Initial release | 2018-12-28 |
| C1 | Accreditation details updated | 2019-02-20 |

# END OF TEST REPORT
