Subject: Models Differences Declaration FCC

We hereby request the following models listed under FCC: YBQ-GII10525:

For Models: GII10525A, GII10525B

We declare that these models are electrically, technically the same. The difference in these models are that `0525-2 is a system with two active units. Both unit A and unit B have a transmitting radar module and a 16 kHz modulator that modulates and reflects the received radar signal back to the opposite active (transmitting) unit.

GII10525A, GII10525B are systems comprising one active and one passive unit. The active units have a transmitting radar module and the passive unit has no transmitting device, just a 16 kHz modulator that modulates and reflects the received radar signal back to the active (transmitting) unit.

GII10525A: Unit A is active

GII10525B: Unit B is active

Sincerely,

A handwritten signature in blue ink that reads "Peter Magnusson".

Peter Magnusson
