

Date: 2025.1.15

Subject: attestation letter per KDB 987594D01 Appendix B

FCC ID: YE3600-AX210NG

To Whom it May Concern

We, [DT Research, Inc.], as the manufacturer of FCC ID: YE3600-AX210NG, hereby, declare that,

1. Note for Modules:

- Device protocol attestation and contention-based protocols apply to functions permanently embedded in the module and cannot be host-dependent. Otherwise, the module must be restricted and filed as a Software Defined Radio or with joint responsibility agreements.
- We, the grantee, will document the physical restrictions associated with the equipment classes for host products (wired power, integral antenna, non-weatherized enclosure) as conditions of use through the host manufacturer's integration instructions.

2. Indoor Client (6XD):

**Device Protocol Attestation Statement**

- As demonstrated in the test report, Contention-Based Protocol is permanently embedded in the module and is not host-dependent.
- The device will only associate and connect with a low-power indoor access point or subordinate device and never directly connect to other client devices.
- This device will always initiate transmission under the control of a low-power indoor AP or subordinate except for brief transmissions before joining a network. These short messages will only occur if the client has detected an indoor AP or subordinate operating on a channel. These brief messages will have a time-out mechanism such that they will not continually repeat the request if they do not receive a response from an AP.
- Transmissions will be lower or equal to the power advertised by the indoor low-power access point or subordinate and never above the maximum output power allowed by the FCC grant for equipment class 6XD.
- Contention-based protocol as demonstrated in the test report is permanently embedded in the module and is not host-dependent.

**Understanding of Statement acknowledging device restrictions**

- Control of or communications with unmanned aircraft systems is prohibited, including drones.
