Correspondence Number	Memo
YENNOP0611-1	<p>1) The user manual provided describes a standalone mode which seems to be manually activated. However, no data is provided to show compliance with the timing requirements in section 15.231 while in this mode. Please provide data to show compliance to the timing requirements in section 15.231 while using this mode of operation. A: (customer provided) The Liquor Monitor Spout has only one mode. The Liquor Monitor Software has two modes in which it can be used; Stand alone or Integrated with an other Point of Sale system. Page one of the manual reads: The Liquor Monitor package can be purchased in two variations: Liquor Monitor Stand-Alone and Liquor Monitor Integrated. Stand-Alone With Liquor Monitor standalone you can monitor all your liquor pours in real time. Just press the button on the spout and Liquor Monitor automatically will enter the serial number in the database for you. In the above paragraph, "The Liquor Monitor package" refers to our Software Package. Also above, "the button on the spout" is the proximity switch. There are no other buttons or modes to the spout that have not been tested. 2) All attestation and request letters are not signed by the authorized representative. Please provide an updated confidentiality request letter, TCB submittal attestation, anti-drug abuse and appointment letter. Additionally, the anti-drug abuse and appointment letter has a different address then listed on the FCC website. A: The Authorized representative and address on the letters are correct but the The Grantee information was not updated; The Grantee information has been updated to include Richard Stack and the current address of 17252 Armstrong Ave, Suite C Irvine, CA 92614. 3) The operational description mentions a proximity switch, however no description regarding how the proximity switch is activated was provided. Please provide additional information regarding this operation. A: The operational description has been updated, please see uploaded exhibit. 4) The transmission time described in the operational description and the transmission time shown in the test report do not match. Please clarify the difference. A: The operational description listed the pulse time and has been updated to include the entire transmission duration. See updated exhibit. 5) The user manual does not have the information to user statement as required in section 15.21. Please provide an update manual. A: The user manual has been updated, please see uploaded exhibit.</p>
