

Quick Start Guide

Rev. 1.4

Boot Screen

Firmware revisions are shown here. BIST, if shown, is the Built-In-Self-Test codes.

Audio Settings

Adjust audio parameters as indicated in the menu.

Video Settings

Select NTSC/PAL modes as well as other video parameters. Note that not all video rates are correctly shown but will be displayed.

Video Settings...more

Scale you image, adjust brightness, hue, sharpness if necessary. Reflections from bright white objects can be controlled with Sharpness

Power Settings

If Power Saver is turned ON then unit will shut off in the absence of video.

Display Settings

If Sleep Brightness is set to OFF, LCD will turn off at the selected Sleep Delay time.

About

Hardware revisions are shown here. BIST is the Built-In-Self-Test codes. If necessary restore unit to factory defaults on this page.

Power Down Screen

Push and hold on/off button to power down transmitter. You can also unplug unit but then you'll miss the message.

A box appears around the active selection, move the arrow to the right or left to select the desired adjustment - move arrow up/down to change setting.

Screen Icon Guide:

1. Selected channel
2. Output power level, 5 steps
3. Audio setting
4. Video setting
5. Power setting
6. Display setting
7. About unit information
8. Selected transmission standard
9. Core unit temperature
10. Measured input voltage

NOTES

- The CanaTrans processor monitors the internal operating temperature and adjusts the cooling blower speed accordingly. Three speeds are available to the CanaTrans but this can be limited to the lowest speed only depending on the user's preference - i.e. for noise considerations. Adjustments can be made in the Power Setting menu under the Fan Speed Override setting. If the measured temperature is 75C the unit will shut down automatically after a brief warning!
- Do not start unit if frozen as it may not boot, warm it up slowly to prevent condensation, then it may be used in the cold;

- Input voltage range is 7-30VDC and maximum power consumption is 12W;
- The colour of the channel indicator shows which antenna should be used, white or orange. Refer to the channel frequency guide on the backside of this page for further information;
- Power cables from the previous CanaTrans units are suitable with the exception of those that also carried video, see switch overlay for pinout;
- An operating temperature between 50-65 degrees Celsius is normal, depending on the ambient temperature - a blower self-test is done

when you turn the unit on, proper blower operation can be confirmed by seeing the blower activated when the CTws is booted (blower located at back in heatsink);

- To access extended menus at the far right of the screen (#5, #6, #7), keep pushing the right arrow button;
- This unit may have usage restrictions in your area. Please ensure that you are complying with your local regulations. Lentequip assumes no responsibilities for any unauthorized use.

Button assignments

Various mounting options exist for the back shroud of the CTWS. Dovetail, swivel dovetail (for 3ality Technica rod mount) and the 3/8" cross mount (LE-CTUF) as found on many original CanaTrans units. M4 threads are provided for the venturous types that would like to make their own rigging.

Three antennas are supplied with the CanaTrans WS. See table at right to determine which one to use. Antennas from the previous CanaTrans are NOT compatible with this unit due to the change in the connector which is part of the compliance requirement. Lower channels will generally give you better range and object penetration. Always use the least amount of power necessary. Only use antennas supplied by Lentequip as they are custom tuned to operate with your CanaTrans White Space.

The CanaTrans WS is equipped with a removable daughterboard input module. We will make others available in the future such as an HDMI input module. Never insert or remove the daughterboard module under power! Keep the daughterboard with the base unit as they are assigned matching serial numbers. Always protect the daughterboard from electrostatic discharge when removed from the base unit.
