Subject: Professional Installation Justification

Dir Sir or Madam:

Integravics, Inc. is seeking FCC approval for an audio assistance transmitter intended for use only in commercial applications. We will require our transmitter to be professionally installed at the customer site. The primary reason for professional installation is to guarantee proper system operation by ensuring the antenna and/or transmitter are properly located to provide the optimum coverage area. Determining optimal antenna placement will require understanding of basic radio frequency principles and also being able to make basic field strength measurements. This will also ensure the proper antenna and extension cable (if necessary) are installed with the unit and avoid an untrained installer using components which would violate our FCC approval.

The product will be sold either directly by Integravics, Inc. and installed using our trained professional installers or directly to distributors who agree to have the product installed using professional installers conforming to our installation guidelines.

Respectfully,

Daniel J. Lyons

President

Integravics, Inc.
