### Attestation Statement

FCC ID: YPHDEB1135-100

Our hardware platform contains 2 radios, one intended for use in the USA and a secondary radio intended for operation in the EU.

The two products have completely separate firmware and are not inter-operable. It is not possible for the end user to change parameters and select an alternative radio (we do not use Country code selection). A different program release is required to operate the European radio and these firmware files are not released to end users.

Additionally the firmware for the EU variant has not been released to manufacturing – currently we are only producing this hardware for the US market. Hub and Gateway firmware does not have the capability to operate both radios as they are mutually exclusive in software. To change the variant you have to reprogram the board – both firmware files and equipment are needed to complete this operation.

Project Manager  
Sharon Woodward
