2

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed

and used in accordance with the instructions, may cause

harmful interference to radio communications. However,

there is no guarantee that interference will not occur in a

particular installation.   If this equipment does cause harmful

interference to radio or television reception, which can be

determined by turning the equipment off and on, the user is

encouraged to try to correct the interference by one or more

of the following measures:

☐ Reorient or relocate the receiving antenna.

☐ Increase the separation between the equipment and receiver.

☐ Connect the equipment into an outlet on a circuit

4

different from that to which the receiver is connected.

□   Consult the dealer or an experienced radio/TV

technician for help**.**

This device complies with Part 15 of the FCC Rules.

Operation is subject to the following two conditions:

1)   this device may not cause harmful interference and

5

2) this device must accept any interference received, including interference that may cause undesired operation of the device.

2) this device must accept any interference received, including interference that may cause undesired operation of the device.

The following are the suggested text on SAR information

Specific Absorption Rate (SAR) information

The SAR limit of USA (FCC) is 1.6 W/kg averaged over one

gram of tissue. This model (FCC ID: YROG150I) has also

been tested against this SAR limited. The highest SAR

value reported under this standard during product

certification for use at the ear is 1.122 W/kg. There are no body

worn configurations (e.g. belt-clips, holsters or similar

accessories), then body SAR is not required.
