Statement of GSM, W-CDMA Functions Disable

Product description: Mobile Phone

Type designation: 101F

Trademark: FUJITSU LIMITED

GSM900,DCS1800, W-CDMA Band I, VIII and XI

The above device (mobile phone) has capability of GSM900, DCS1800, W-CDMA Band I, VIII and XI. These functions cannot be activated by the user in case the mobile phone is used or switched on in the United States. These functions can also not be activated by the user in case the mobile phone is outside of the service area of a mobile phone network while switched on. In both cases, these functions are also not activated automatically.

When the mobile phone is inside the service area of a mobile phone network, it will search all available cellular networks. These functions will not switch on automatically unless mobile phone detects networks having GSM900, DCS1800, W-CDMA Band I , VIII and XI , or if the mobile phone detect network having PCS1900. Therefore these functions are never activated in the United States where there is no commercial network for those services. While searching for the network the mobile phone does not transmit any signal. And DC-HSDPA function cannot be activated on outside of Japan by the same reason .

Also, the user access to all functions related to GSM900, DCS1800, W-CDMA Band I, VIII and XI will be disabled where it cannot detect networks having those services, or where it can detect network having PCS1900 and these prevent the user from manually switching on these functions.
