

The device has a standalone transmission.

According to KDB 447498 section 4.3.1, the 1-g SAR test exclusion thresholds at test separation distances \leq 50 mm are determined by:

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0$

The maximum tune-up limit power is 7.88dBm(6.14mW) @ 2.412GHz

For the head and body SAR, use 5mm as the conservative minimum test separation distance,
 $[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] = 1.906 \leq 3.0$

So standalone SAR measurements are not required for both head and body.

Remark:

The product 7 inch Tablet PC(Model:VTA0702, FCC ID:YW5VTA0702) is electrically identical with the product 7 inch Tablet PC(Model:VTA0701, FCC ID:YW5VTA0701).

In that case, the data of VTA0702 is same to the data of VTA0701.
