

Exhibit "Label Location"

LSC Locator Systems International Label Location Justification

- a) There is limited space on the device for providing a proper label. The device is curved and contains many contoured surfaces.
- b) We cannot place an adhesive label on the outside of the device because Autistic Children are distracted by labels, stickers, or marks on the case. Experience has shown us that they will do almost anything to get these "markings" off the case.
- c) The battery compartment is designed to be easily opened, once a month, to have the battery replaced. The FCC and IC identifiers will be easily and readily viewable once the battery compartment is opened and the battery has been extracted.
- d) The device is sold without the battery cap attached to the unit. There is no battery installed in the device until it about to be used. The FCC identifier will be easily and readily viewable before the device is installed on the client

Sincerely,

A handwritten signature in black ink, appearing to read "Andrew Loen", written on a white background.

Andrew Loen, P.Eng.
