

3.2.3.2 FM3100 Radio

The FM3100 is used on the masts for the central backhaul unit and is shown in the following figure:

Figure 3–11 FM3100 Radio

3.2.4 Mast Kit Components

The following table lists the Mast Kit components. The remote and central backhauls use the same mast kit components:

Table 3–4 Mast Kit

Remote Backhaul Components	
Item	Reference
Mast (55-0008)	"Mast" on page 42
Base (55-0007)	"Base" on page 42
Base, weighted (70-0070)	"Base" on page 42
Bag (70-0058)	"Bag" on page 45
Ethernet Cable, 25 ft (65-0046) (2 each)	"Cables" on page 38
Backpack Kit (15-0014)	"Backpack Kit" on page 45
1 each backpack (70-0059)	"Backpack Kit" on page 45
3 each guy lines, rope, orange, 15.25 meters (70-0057)	"Backpack Kit" on page 45

3. Backhaul

Backhaul Components

Table 3–4 Mast Kit (cont.)

Remote Backhaul Components	
Item	Reference
• 3 each tent stake, steel, 12 in (70-0061) (hard ground stakes)	<i>"Backpack Kit" on page 45</i>
• 3 each tent stake, plastic, orange, 16 in (70-0060) (soft ground stakes)	<i>"Backpack Kit" on page 45</i>
• 5 ea nail, 12 in (70-0062)	<i>"Backpack Kit" on page 45</i>
• 3 each guy line holder (70-0063)	<i>"Backpack Kit" on page 45</i>
• 1 each hammer, 2.5 lb (70-0064)	<i>"Backpack Kit" on page 45</i>
• 1 each pry bar, 15 in (70-0065)	<i>"Backpack Kit" on page 45</i>
• 2 each flagging roll, orange (70-0066)	<i>"Backpack Kit" on page 45</i>
• 1 each compass sighting (70-0067)	<i>"Backpack Kit" on page 45</i>
• 5 each hose clamp, 2 in (70-0068)	<i>"Backpack Kit" on page 45</i>

3.2.4.1 Mast

Lightweight, telescoping backhaul masts are used to elevate the backhaul components above obstructions and to enable radio communications to accommodate typical cross-line distances. The mast can be installed by a single person. The following figures show the mast components:

Figure 3–12 Mast (55-0008)

3.2.4.2 Base

There are two base options; one that requires the use of guy wires for stabilization and one that uses weights for stabilization.

The following figures show the base that utilizes guy-wires:

Figure 3-13 Base (55-0007)

3. Backhaul

Backhaul Components

The following figure shows the assembled mast with the BSU in the foreground:

Figure 3–14 Assembled Backhaul Mast

The following figure shows the base that uses a weighted system. This base is optimal in urban or rocky environments:

Figure 3-15 Base (70-0070)

3.2.4.3 Bag

The antenna mast bag is a rip stop nylon yellow bag, 11 inches x 70 inches with a handle and draw string at one end (see *Figure 3-4 Backhaul Components Packed for Transport on page 35*).

3.2.4.4 Backpack Kit

The backpack is used to carry all of the equipment needed to install the mast and radios, and may also be use to carry the BSU. See “*Mast Kit*” on *page 41* for a list of components (see *Figure 3-4 Backhaul Components Packed for Transport on page 35*).

3.3 Configure the Radios

The FMQuadro™ Web Interface is used to configure the radio channels. The radio licenses are pre-configured by Wireless Seismic, Inc. This section describes how to connect the radios to a computer and configure them.

NOTE

The expected configuration in the RT 1000 system is as follows:

FM1100 = mesh point (remote backhaul)

FM3100 = mesh end (central backhaul)

Check the radios before connecting them to any switch.

3.3.1 Create a Private Network

Create a private network between the computer and the Fluidmesh radio.

NOTE

All Fluidmesh units are preconfigured with an IP address of 192.168.0.10.

- 1 Prerequisites:
 - Windows computer
 - Browser with Adobe Flash
 - AC Power
 - PoE Injector
 - Two Ethernet Cables
- 2 Power on the computer.
- 3 Connect the components (see *Figure 3–16 Fluidmesh Radio Private Network on page 47*):
 - Plug the PoE injector into an AC outlet.
 - Connect the computer to the PoE injector with an Ethernet cable.
 - Connect the Fluidmesh radio to the PoE injector with an Ethernet cable. The radio powers up.
 - ▶ FM1100 – Connect to LAN 1
 - ▶ FM3100 – There is only one connector

CAUTION

Power up only one radio at a time. Never place two powered-up radios next to each other. It is possible to damage the radio receivers if multiple radios are powered up in close proximity.

Figure 3–16 Fluidmesh Radio Private Network

- 4 Verify that the radio powers up. The LED indicators have the following meanings:

Table 3–5 Fluidmesh Radio LEDs

LED	State	Description
Power	On / Green	On whenever the radio has power
LAN	On / Green	On whenever the radio has an Ethernet connection
Signal Strength (1)	On / Red	Booting Core system
Signal Strength (2)	On / Orange	Booting wireless system
Signal Strength (3)	On / Green	Booting routing engine
Signal Strength (4)	On / Green	Booting unit configuration

- 5 Click the Windows Start icon.
- 6 Select **Control Panel**. The **Control Panel** window opens.
- 7 Select **Network and Internet**.

3. Backhaul

Configure the Radios

Figure 3–17 Control Panel, Network and Internet

8 Select **Network and Sharing Center**.

Figure 3–18 Control Panel, Network and Sharing Center

- 9 In the left pane, select **Change adapter settings**.

3. Backhaul

Configure the Radios

Figure 3-19 Control Panel, Change Adapter Settings

- 10 Right-click **Local Area Connection** and select **Properties**. The **Properties** window opens.

Figure 3–20 Control Panel, LAN Properties

11 Select **Internet Protocol Version 4 (TCP / IP v4)** and click **Properties**.

3. Backhaul

Configure the Radios

Figure 3–21 Control Panel, Networking Properties

12 Select **Use the following IP address**.

Figure 3–22 Control Panel, IP Address

13 Enter the following:

- IP address: 192.168.0.100 (this number does not have to be 100, just something other than 10, and a number between 1 and 255)
- Netmask: 255.255.255.0

NOTE

If the radio already has an IP address, you will need to enter different numbers. For example:

Radio IP address: 10.101.0.22

Computer IP address: 10.168.0.100

Subnet Mask: 255.0.0.0

You may need to disable and enable (right-click) the LAN connection if it displays Network cable unplugged in the Network Connections window.

If the radio gets reset, the default IP address is 192.168.0.10.

14 Click **OK**.

15 Click **Close**.

3.3.2 Setting NIC Priority

If you have more than one network interface card (NIC) in your computer, make sure that the LAN card has the highest priority; the computer attempts to use the NICs in the order listed.

To set NIC priority:

→ **Windows computer**

- 1** Click the Windows Start icon.
- 2** Select **Control Panel**. The **Control Panel** window opens.
- 3** Select **Network and Internet**.
- 4** Select **Network and Sharing Center**.
- 5** In the left pane, select **Change adapter settings**.
- 6** In the toolbar, click **Advanced**, and then **Advanced Settings**.

Figure 3–23 Advanced Network Settings Menu

- 7 Select **Local Area Connection** and then click the up arrow repeatedly until **Local Area Connection** is the first item.

Figure 3–24 LAN Hierarchy

- 8 Click **OK**.

3.3.3 Configure the Radio

Configure the radios by logging into the software located on the radio. FM1100s are configured as mesh *points*, and FM3100s are configured as mesh *ends*.

To configure the radio:

→ **Windows computer**

- 1 On the computer, point a browser to the following URL:

`http://192.168.0.10`

TIP

Use Mozilla Firefox or Google Chrome. Internet Explorer does not refresh correctly.

NOTE

If the radio has an IP address other than the default IP address, you will need to enter that number. For example, 10.101.0.22.

- 2 Log in to the radio Web interface using the following:

- **UserName:** admin
- **Password:** admin

Figure 3–25 Radio Login Window

- 3 The following figure shows the home window when **mesh end** is selected as the **Mode**. The FM1100 configuration includes an additional left-pane option: **Power Over Ethernet**. Click **MeshWizard™**.

Figure 3–26 Radio Home Window, Mesh End

- 4 Click **I Agree** to accept the licence agreement if prompted.
- 5 Click **Wizard**.
- 6 Select or enter the following:
 - **Mode**
 - ▶ **FM1100** – Mesh Point
 - ▶ **FM3100** – Mesh End
 - **IP Address** – Use next class A address available (10.2.0.1 - 10.2.0.255)
 - **Netmask** – 255.0.0.0
 - **Default Gateway**
 - ▶ **FM1100** – Not shown or available

3. Backhaul

Configure the Radios

- **FM3100** – Leave blank

The screenshot shows the Fluidmesh MeshWizard interface. At the top, the Fluidmesh Networks logo is on the left and the MeshWizard™ title is on the right. Below the title, there is a 'Mode:' section with two radio buttons: 'Mesh Point' and 'Mesh End'. The 'Mesh End' button is selected. Below this is a horizontal line. Underneath the line is the 'Unit Address Configuration' section. It contains three input fields: 'IP Address' with the value '10.101.0.22', 'Netmask' with the value '255.0.0.0', and 'Default Gateway' which is empty. At the bottom of the form, there are two buttons: 'Back' on the left and 'Next' on the right.

Figure 3–27 Fluidmesh MeshWizard Interface

- 7 Click **Next**.
- 8 Select one of the following frequencies (see *Figure 3–9 Channel Color Example on page 40*):
 - Channel 1 = 5745 MHz (Yellow label)
 - Channel 2 = 5805 MHz (Blue label)
 - Channel 3 = 5180 MHz (Red label)
 - Channel 4 = 5785 MHz (Green label)
- 9 Click **Next**.
- 10 Verify the settings. Click **Save&Reboot**.

11 FM1100 only:

- Click **poE pass-through** in the **ADVANCED SETTINGS** area of the left pane. This option allows the LAN 2 port on the radio to deliver passive PoE to a second FM1100 on the mast using one short Ethernet cable.
- Select **Enable** for the **Status**.
- Click **Apply**.

3.3.4 Restore your Network Settings

When have finished configuring all of your radios, restore your network settings as described in this section.

To restore network settings:**→ Windows computer**

- 1 Click the Windows Start icon.
- 2 Select **Control Panel**. The **Control Panel** window opens.
- 3 Select **Network and Internet**.
- 4 Select **Network and Sharing Center**.
- 5 In the left pane, select **Change adapter settings**.
- 6 Right-click **Local Area Connection** and select **Properties**. The **Properties** window opens.
- 7 Select **Internet Protocol Version 4 (TCP / IP v4)** and click **Properties**.
- 8 Select **Obtain IP address automatically**.
- 9 Click **OK**.
- 10 Click **Close**.

3.3.5 Using the Fluidmesh Interface to Scan

TBD

3.3.6 Using the Fluidmesh Interface to Ping

TBD

3.4 Setting up the Backhaul Equipment

Use the following procedure to erect and secure the mast

3. Backhaul

Setting up the Backhaul Equipment

NOTE

There are many possible mast options; the following instructions are a general guideline.

To install the backhaul components and erect the mast:

- 1 Prerequisites:
 - Gather the components
 - Screwdriver
 - Hammer
- 2 Refer to the deployment instructions to determine the location and compass heading to the next back haul site closer to central.
- 3 Use the compass to determine and mark that direction.
- 4 Use the following considerations while positioning the base:
 - Locate the base such that the three guy lines and the mast clear obstructions during erection and while in operation.
 - If the ground is sloped, position the base such that when the base is flush to the ground, the bracket orientation allows the mast to remain perpendicular to the ground as shown in the following figure:

Figure 3–28 Mast on a Slope

- If the wind is blowing, the mast is more stable when the brackets are perpendicular to the wind as shown in the following figure:

Figure 3-29 Base and Wind Orientation

- 5 Collect all of the mast components.
- 6 Secure the base with at least 2 nails or if using a weighted mast, with cement blocks.
- 7 Insert the mast into the base collar, extend and secure each section of the mast.
- 8 Attach the guy lines to the collar on the mast, or make loops in the lines and slip them over the mast.
- 9 Align one guy line so that it extends in the opposite direction from the mast while the mast is still on the ground.
- 10 Align the other two guy lines at 120 degrees (1/3 of a circle) from the first guy line.
- 11 Hammer guy line stakes into ground and secure guy lines at the indicated marks.
- 12 Attach the radio or radios at the top of the mast.
- 13 Uncoil an Ethernet cable, attach one end to a radio unit and the other end to the PoE. Form a service loop (extra cable) by looping the Ethernet cable over the top of the radio unit. If you are installing two radios on the mast, refer to *"Installing Two Radios on the Mast"* on page 63 for cabling and configuration instructions.
- 14 Ensure that all directional antennas, when raised, are pointed correctly. The radio unit should be facing toward the recording truck.
- 15 While holding the free guy line, lift / walk the mast to a vertical position and secure the line into the cleat.
- 16 Adjust all lines to bring the mast to a vertical position.
- 17 Ensure that each line is firmly seated in each cleat, loosely wrap lines around mast and secure at the large cleat on the base.

3. Backhaul

Setting up the Backhaul Equipment

Figure 3-30 *Securing Lines to Large Cleat*

Figure 3-31 *Backhaul Antenna Erected*

18 Check to make sure that the antennas are aimed properly.

- 19 Uncoil an Ethernet cable. Attach one end to the BSU and the other end to the PoE.
- 20 Check Ethernet status lights, if not green or flashing green remove Ethernet cable from the PoE, count to five and re-insert.
- 21 If status does not change to green or flashing green report the condition.

3.5 Installing Two Radios on the Mast

When you are installing a remote backhaul, there can be two radios on the mast as shown in the following figure:

Figure 3–32 Two-Radio Installation

To install two radios on the mast:

- 1 Prerequisites:
 - TBD
 - The radios are configured to allow the PoE option (see *step 11 on page 59*).
 - The radios are BOTH configured as mesh POINTS (see *step 6 on page 57*).
- 2 Attach two radios to the mast. Refer to the deployment instructions for the location at which to aim the radio. One should point towards the recording truck (uplink), and the other should point towards the next remote backhaul location (downlink).
- 3 Connect the two radios with a short Ethernet cable: Radio1/LAN 2 to Radio 2/LAN 1.
- 4 Connect Radio 1/LAN 1 to the PoE.

3.6 Removing the Backhaul Equipment

TBD

3.7 Use Cases or Example Deployments

This section shows a few example deployments.

Figure 3–33 2D Single Backhaul

3. Backhaul

Use Cases or Example Deployments

Figure 3-34 3D Dual Backhaul, Two Root Nodes

Figure 3–35 2D Single Backhaul, Star Configuration

Demobilization

4.1 Overview

This chapter describes how to prepare (undeploy) the ground electronics for transport at the end of a project (demobilization).

4.2 Removing the WRU from the Field

This section describes the process to ready the WRU for movement to a new physical location or to remove it in preparation for demobilization.

To undeploy the WRU:

- 1 Prerequisites:
 - The WRU is assembled with battery, geophone, and antenna
 - The WRU is in an active, transitional, or ready state
- 2 Pick up the WRU and point the geophone connector end towards the sky as shown in the following figure. All of the LEDs illuminate:

Figure 4-1 Power Off the Unit

- 3 Place the unit flat in the transportation vehicle as shown in the following figure. The unit shuts down. The LEDs on the top of the unit are off.

Figure 4–2 Undeployed Unit

- 4 Optional: Remove batteries, antenna, or geophone as described in “Disassemble the WRU” on page 69.

4.3 Disassemble the WRU

This section describes the process to disassemble the WRU prior to demobilization.

To disassemble the WRU:

- 1 Undeploy the equipment as described in “Removing the WRU from the Field” on page 68.
- 2 Remove the antenna from the unit.

4. Demobilization

Disassemble the WRU

TBD

Figure 4-3 Removing the Antenna

- 3 Remove the geophone from the unit.

Image showing geophone installation TBD.

Figure 4-4 Removing the Geophone

- 4 Remove the batteries from the unit.
 - Press the catch on the battery latch.
 - Lift the lever, but do not lift the bail from the molded area on the battery.
 - Continue to lift the lever using the bail to push the battery out of the connector.

Figure 4-5 Removing the Battery

- 5 Secure the equipment in the transport vehicle.

Maintaining the Equipment

WARNING

In order to comply with FCC radio frequency (RF) exposure requirements, the RT 1000 units must be installed so that a minimum separation distance of 20 cm is maintained between the antenna(s) and all persons at all times during normal operation.

WARNING

AVERTISSEMENT

Afin de se conformer aux exigences de la FCC en matière d'exposition aux radiofréquences (RF), les unités RT 1000 doivent être installées de manière à garder en permanence une distance minimale de 20 cm entre la ou les antennes et toute personne en mode de fonctionnement normal.

5.1 Units

TBD

5.2 Antennas

Ensure that the antennas are snug.

TBD

5.3 Geophones

Ensure that the geophone connection is clean and snug.

TBD

5.4 Cautions

TBD

Troubleshooting and Tips

6.1 Best Practices

This section provides some tips on working with the equipment.

6.1.1 24 Ah Batteries

In order to maintain the best possible communication channel, observe the following tips:

- ◆ Place a fully charged 24 Ah battery on the backhaul every day. **(90-0012)**
- ◆ Keep extra 24 Ah batteries charged up at the staging area.
- ◆ Store 24 Ah batteries at the staging area when not in use. Deep discharging of the batteries can shorten their lifespan considerably.

6.1.2 PoE

When temperature swings are extreme, or weather is severe, store the PoE boxes in the recording truck at night.

To ensure a protected connection, be sure to use an Ethernet cable with a protective shell (65-0051) when connecting Ethernet cables to the PoE (see *Figure 3–8 Protective Ethernet Connector on page 38*).

CAUTION

Do not allow the PoE battery to remain connected at a voltage of 22V or less. Damage to the equipment could occur.

6.1.3 Urban Environments

The following could impact your configuration in urban environments:

- ◆ You may need to use repeaters when crossing a road.
- ◆ You may need to extend the antenna with coaxial cable
- ◆ You may need to adjust WRU placement and antenna strength when crossing a road.
- ◆ You will need to consider the presence of power lines and buildings when placing WRUs and backhaul components.

6.1.4 Ethernet Cables

Use CAT6 enhanced quality cables.

To ensure a protected connection, be sure to use an Ethernet cable with a protective shell (65-0051) when connecting Ethernet cables to the PoE (see *Figure 3–8 Protective Ethernet Connector on page 38*).

6.1.5 Antennas

When placing or selecting antennas in, consider the following:

- ◆ In areas where there is a steep inclination, smaller gain antennas may provide a better signal.
- ◆ In areas where there is a steep inclination, try to reduce the inclination by going up or down at an angle rather than straight up or down.
- ◆ Use repeaters to cover overpass and steep inclination situations.
- ◆ If you need more signal strength, use an extender with a riser to elevate the antenna. This is the typical scenario with the BSU at the backhaul location.

6.2 Troubleshooting

TBD

6.2.1 Fluidmesh Radios

TBD

Table 6–1 Troubleshooting Fluidmesh Radios

Problem	Solutions
Not communicating	• Try sending a ping command in a CMD window to the IP address of the radio. • If you are trying to connect directly with a computer, make sure you have configured a private network (see “Create a Private Network” on page 46). • Ensure that you have configured the radios as follows: - FM1100 = mesh POINT (remote backhaul) - FM3100 = mesh END (central backhaul)
Cannot access GUI	If you configure two FM1100 radios on the same mast to be a mesh POINT and a mesh END, they will communicate over the switch and lock everything else out of the communication loop. They must both be configured as mesh POINTS
GUI not responding	It takes one full minute to see the alignment statistics in the Fluidmesh GUI (from the browser), so be sure to wait for it.

Batteries

This chapter provides information about the batteries and battery requirements used in the Wireless Seismic, Inc. RT 1000 system.

7.1 Lithium Ion Batteries

This section provides information regarding the characteristics, use, and handling of lithium ion batteries. See the following sections for details:

- “Specifications” on page 75
- “Handling and Safety Guidelines” on page 76
- “Transportation” on page 77
- “Storage” on page 78

7.1.1 Specifications

The RT 1000 uses one or two custom intelligent lithium-ion batteries with self-contained charging circuitry that protects the batteries from overcharge, discharge, short circuits, or extreme temperature charging.

Battery specifications are shown in the following table:RT 1000RT 1000

Table 7–1 Lithium Ion Battery Specifications

Item	Description	Value
Voltage	Nominal	3.7 VDC
	Shut-off	2.8 VDC
	Full (90%) charge	4.1 VDC
Full (90%) charge mAh	Approximately 12,000 mAh at nominal voltage	
Full (90%) charge mWh	Approximately 44,400 mWh at nominal voltage	
Connector	5-pin	

7. Batteries

Lithium Ion Batteries

Table 7–1 Lithium Ion Battery Specifications (cont.)

Item	Description	Value
LED	One LED that indicates charging status when connected to the charging station as follows	• Green – Charged • Red – Charging • Amber – Transitional phase between charging and charged, or charge temperature limits exceeded
Label	One bar code serial number label	
Temperature	Operating	From -50°C to +75°C
	Charging	From 0°C to +45°C
	Ambient Storage	• From -20°C to +45°C for a maximum period of one month • From -20°C to +35°C for a maximum of 6 months, after which time the battery packs will need to be recharged to above 50% capacity

7.1.2 Handling and Safety Guidelines

Observe the following handling and safety guidelines:

- ♦ If a battery pack has leaking fluids, do not touch any fluids. Dispose of a leaking battery pack. In case of eye contact with fluid, do not rub eyes. Immediately flush eyes thoroughly with water for at least 15 minutes, lifting upper and lower lids until no evidence of the fluid remains. Seek medical attention.
- ♦ Do not disassemble, crush, or puncture a battery
- ♦ Do not short the external contacts on a battery
- ♦ Do not dispose of a battery in fire or water
- ♦ Do not expose a battery to temperatures above 60 °C (140 °F)
- ♦ Keep the battery away from children
- ♦ Avoid exposing the battery to excessive shock or vibration
- ♦ Do not use a damaged battery
- ♦ Lithium Ion battery packs MUST be completely discharged before disposal
- ♦ Although there may be local or state restrictions, lithium ion batteries are considered by the Federal Government as “non-hazardous universal waste”. There are restrictions for large quantity handlers of universal waste that define labeling, containment, and so on. Whenever possible the batteries must be

discharged before disposal. Battery leads/contacts should be taped off to prevent accidental shorting. Each battery pack should be placed in a plastic bag.

- ◆ Recycling is encouraged when practical and applicable. The batteries contain recyclable material and are accepted by several battery recycling companies. Refer to one of the following for more information on recycling and disposal:
 - <http://www.swe.com>
 - <http://www.rbrc.org>
 - <http://www.call2recycle.org>
 - 1-800-8-BATTERY
 - 1-877-2-RECYCLE

7.1.3 Transportation

In the United States, large lithium ion battery shipments (more than 24 cells or 12 batteries per package) are regulated as hazardous material (Class 9) by the Federal Government and are subject to the regulations described in the following:

- ◆ Code of Federal Regulations, Title 49 Transportation.
http://ecfr.gpoaccess.gov/cgi/t/text/text-idx?sid=92868a82add6feba6afa796572133179&c=ecfr&tpl=/ecfrbrowse/Title49/49tab_02.tpl
- ◆ International Air Transport Association (IATA)
http://www.iata.org/whatwedo/cargo/dangerous_goods/pages/lithium_batteries.aspx

Batteries can be ground shipped only if all of the following conditions are met:

- ◆ Box used meets the 1.2 m drop test box ("UN" rated box) for packaging
- ◆ Battery pack terminals are protected to prevent a short circuit
- ◆ Gross weight does not exceed 30 kg (66 pounds)
- ◆ Outer package is labeled with the current required label. An example is shown in the following figure.

7. Batteries

Lithium Ion Batteries

Figure 7–1 Example Battery Shipping Label

Batteries can be air shipped only if all of the following conditions are met:

- ◆ Box used meets the 1.2 m drop test box ("UN" rated box) for packaging
- ◆ Maximum weight of each package does not exceed 10 kg (22 lbs)
- ◆ Battery pack terminals are protected to prevent a short circuit
- ◆ Outer package is labeled with the current required label. An example is shown in the previous figure ("Example Battery Shipping Label" on page 78).

WARNING

The information contained in this document is intended to provide general awareness of battery regulations; it is not comprehensive, and the requirements referenced herein may have changed. Nothing in this chapter or the Deployment Guide constitutes legal advice or is intended to address any specific legal, compliance, or regulatory issues that may arise in particular circumstances. This chapter and the Deployment Guide are not intended to replace current, official regulations regarding the packaging and shipment of hazardous materials or independent legal counsel on these issues. You are solely responsible for compliance with all applicable laws, regulations, and other requirements. Please refer to an official copy of the current version of these documents for the latest information.

7.1.4 Storage

Proper storage and maintenance of Lithium Ion batteries is essential to maximize their useful life and avoid catastrophic failure. Observe the following storage precautions:

- ◆ Remove the batteries from the WRU for storage
- ◆ The recommended storage temperature for Lithium ion batteries is as follows:
 - From -20°C to +45°C for a maximum period of one month
 - From -20°C to +35°C for a maximum of 6 months, after which time the battery packs will need to be recharged to above 50% capacity
 - Storing at cooler temperatures slows down self discharge and capacity loss over time. Store the batteries at 25°C or less if possible
- ◆ The recommended storage charge levels are as follows:
 - Charge (or discharge) batteries to a 30% to 50% charge level before placing into storage. Higher or lower charge levels can reduce the battery life.
 - Never store the battery completely depleted of charge unless for disposal.
 - Periodic charging is necessary to maintain 30% to 50% charge when stored for a long period of time
- ◆ Store batteries in a well ventilated area
- ◆ Do not leave batteries unused for extended periods of time, either in the product or in storage. When a battery has been unused for 6 months, check the charge status and charge or dispose of the battery as appropriate.
- ◆ Routinely check the battery's charge status
- ◆ Consider replacing the battery with a new one if you note either of the following conditions:
 - The battery run time drops below about 80% of the original run time
 - The battery charge time increases significantly

7.2 Charging Lithium Ion Batteries

This section describes charging precautions and provides an overview of the battery charger.

7.2.1 Charging Precautions

Observe the following charging precautions:

- ◆ Prior to charging, inspect the battery for any visible damage to the case or connector that could create an electrical shortage.
- ◆ The temperature range over which the battery can be charged is 0°C to +45°C. Charging the battery outside of this temperature can cause the battery to become hot or to break.
- ◆ Be absolutely sure that only a 5 V source is used when charging the battery.
- ◆ Care should be taken to charge batteries on a fireproof surface.
- ◆ Do not charge batteries near flammable items or liquids.
- ◆ Keep a Class C Dry Chemical fire extinguisher nearby.

7. Batteries

Charging Lithium Ion Batteries

- ◆ Do not continue recharging the battery if it does not recharge within the specified charging time.
- ◆ A lithium ion battery should NEVER be left unattended while charging.

7.2.2 Battery Charger

The lithium ion battery charger is designed to operate from a single 10 A, 120 VAC service line.

The power supply to charge the battery pack is a 5VDC regulated voltage supply.

TBD

Batteries

Ce chapitre fournit des informations sur les batteries utilisées dans le système RT 1000 de Wireless Seismic, Inc.

8.1 Batteries au lithium-ion

Cette section fournit des informations sur les caractéristiques, l'utilisation et la manipulation des batteries au lithium-ion. Reportez-vous aux sections suivantes pour en savoir plus :

- “Spécifications” on page 82
- “Directives en matière de manipulation et de sécurité” on page 83
- “Transport” on page 84
- “Entreposage” on page 86

8.1.1 Spécifications

Le RT 1000 utilise une ou deux batteries au lithium-ion intelligentes et personnalisées, dotées d'un circuit de charge autonome qui protège les batteries contre les surcharges, décharges, courts-circuits ou changements extrêmes de température.

Le tableau suivant indique les spécifications des batteries :

Tableau 8–1 Spécifications des batteries au lithium-ion

Élément	Description	Valeur
Tension	Nominale	3,7 V c.c.
	Arrêt	2,8 V c.c.
	Charge complète (90 %)	4,1 V c.c.
Charge complète (90 %) mAh	Environ 12 000 mAh à la tension nominale	
Charge complète (90 %) mWh	Environ 44 400 mWh à la tension nominale	
Connecteur	5 broches	

Tableau 8-1 Spécifications des batteries au lithium-ion (cont.)

Élément	Description	Valeur
DEL	Une DEL qui indique l'état de charge lors de la connexion à la station de charge, de la manière suivante :	• Vert : chargé • Rouge : en train de charger • Orange : phase transitionnelle entre l'état de chargement et l'état chargé, ou dépassement des limites de la température de charge
Étiquette	Une étiquette indiquant le numéro de série sous forme de code à barres	
Température	Fonctionnement	De -50°C à +75°C
	Chargement	De 0°C à +45°C
	Entreposage à température ambiante	• De -20°C à +45°C durant une période maximum d'un mois • De -20°C à +35°C durant 6 mois maximum ; passé ce délai, les blocs-batteries doivent être rechargés à plus de 50 % de leur capacité

8.1.2 Directives en matière de manipulation et de sécurité

Respecter les directives suivantes en matière de manipulation et de sécurité :

- ♦ Si un bloc-batterie présente une fuite de liquides, ne pas toucher les liquides. Jeter le bloc-batterie en cas de fuite. En cas de contact oculaire avec du liquide, ne pas se frotter les yeux. Rincer immédiatement les yeux avec de l'eau pendant au moins 15 minutes, en soulevant les paupières supérieures et inférieures jusqu'à ce qu'il n'y ait plus de trace de liquide. Consulter un médecin.
- ♦ Ne pas démonter, écraser ou percer une batterie
- ♦ Ne pas court-circuiter les contacts externes d'une batterie
- ♦ Ne pas jeter une batterie dans le feu ou l'eau
- ♦ Ne pas exposer une batterie à des températures supérieures à 60 °C (140 °F)
- ♦ Maintenir la batterie à l'écart des enfants
- ♦ Éviter d'exposer la batterie à des vibrations ou chocs excessifs
- ♦ Ne pas utiliser une batterie endommagée

8. Batteries

Batteries au lithium-ion

- ◆ Les blocs-batteries au lithium-ion DOIVENT être entièrement déchargés avant leur élimination
- ◆ Bien qu'il puisse exister des restrictions locales ou nationales, les batteries au lithium-ion sont considérées comme des « déchets universels non dangereux » par le gouvernement fédéral. Il existe des restrictions qui s'appliquent à ceux qui gèrent de grandes quantités de déchets universels ; celles-ci définissent l'étiquetage, le confinement, etc. Dans la mesure du possible, les batteries doivent être déchargées avant de les jeter. Les conducteurs/contacts de batterie doivent être fixés de manière à éviter un court-circuit accidentel. Chaque bloc-batterie doit être placé dans un sac en plastique.
- ◆ Le recyclage est encouragé lorsqu'il est réalisable. Les batteries contiennent des matériaux recyclables et sont acceptées par plusieurs entreprises de recyclage de batteries. Reportez-vous à l'un des éléments suivants pour obtenir plus d'informations sur le recyclage et l'élimination :
 - <http://www.swe.com>
 - <http://www.rbrc.org>
 - <http://www.call2recycle.org>
 - 1-800-8-BATTERY
 - 1-877-2-RECYCLE

8.1.3 Transport

Aux États-Unis, les expéditions de grandes quantités de batterie au lithium-ion (plus de 24 piles ou 12 batteries par colis) sont réglementées comme des matières dangereuses (classe 9) par le gouvernement fédéral et sont soumises aux règlements décrits ci-après :

- ◆ Code of Federal Regulations, Title 49 Transportation.
http://ecfr.gpoaccess.gov/cgi/t/text/text-idx?sid=92868a82add6feba6afa796572133179&c=ecfr&tpl=/ecfrbrowse/Title49/49tab_02.tpl
- ◆ International Air Transport Association (IATA)
http://www.iata.org/whatwedo/cargo/dangerous_goods/pages/lithium_batteries.aspx

Les batteries ne peuvent être expédiées par voie terrestre que si toutes les conditions suivantes sont satisfaites :

- ◆ La boîte utilisée satisfait le test de chute de 1,2 m (boîte classée « UN ») de boîte d'emballage
- ◆ Les bornes de bloc-batterie sont protégées pour éviter un court-circuit
- ◆ Le poids brut ne dépasse pas 30 kg (66 livres)
- ◆ L'emballage extérieur porte l'étiquette requise en vigueur. La figure suivante en montre un exemple.

Exemple 8-1 Example Battery Shipping Label

Les batteries ne peuvent être expédiées par voie aérienne que si toutes les conditions suivantes sont satisfaites :

- ♦ La boîte utilisée satisfait le test de chute de 1,2 m (boîte classée « UN ») de boîte d'emballage
- ♦ Les bornes de bloc-batterie sont protégées pour éviter un court-circuit
- ♦ Le poids brut de chaque colis ne dépasse pas 10 kg (22 livres)
- ♦ L'emballage extérieur porte l'étiquette requise en vigueur. La figure précédente en montre un exemple (*"Example Battery Shipping Label" on page 85*).

AVERTISSEMENT

Les informations contenues dans le présent document ont pour but de fournir une connaissance générale des règlements s'appliquant aux batteries. Elles ne sont pas exhaustives, et les conditions mentionnées dans ce document peuvent avoir changées. Rien dans le présent chapitre ou dans le Guide de déploiement ne constitue un avis juridique ou est destiné à répondre aux problèmes juridiques, de conformité, ou réglementaires spécifiques qui peuvent survenir dans des circonstances particulières. Le présent chapitre et le Guide de déploiement ne sont pas destinés à remplacer les règlements officiels en vigueur concernant l'emballage et l'expédition de matières dangereuses ou un conseil juridique indépendant sur ces questions. Vous êtes seul responsable du respect de toutes les lois, règlements et autres exigences. Veuillez vous reporter à une copie officielle de la version en vigueur de ces documents pour obtenir les dernières informations.

8.1.4 Entreposage

Un entreposage et un entretien adéquats des batteries au lithium-ion est indispensable pour optimiser leur durée de vie utile et éviter une défaillance catastrophique. Respecter les précautions suivantes en matière d'entreposage :

- ◆ Retirer les batteries de l'unité distante sans fil avant l'entreposage
- ◆ Température d'entreposage recommandée des batteries au lithium-ion :
 - De -20°C à +45°C durant une période maximum d'un mois
 - De -20°C à +35°C durant 6 mois maximum ; passé ce délai, les blocs-batteries doivent être rechargés à plus de 50 % de leur capacité
 - L'entreposage à basses températures ralentit la décharge naturelle et la perte de capacité au fil du temps. Entreposer les batteries à 25°C ou moins si possible
- ◆ Niveaux de charge d'entreposage recommandés :
 - Charger (ou décharger) les batteries à un niveau de charge de 30 % à 50 % avant de les entreposer. Des niveaux de charge inférieurs ou supérieurs peuvent réduire la durée de vie des batteries.
 - Ne jamais entreposer des batteries entièrement déchargées, sauf en cas d'élimination.
 - Un chargement périodique est nécessaire pour maintenir une charge de 30 % à 50 % en cas d'entreposage de longue durée
- ◆ Entreposer les batteries dans un endroit bien aéré
- ◆ Ne pas laisser les batteries inutilisées pendant de longues durées, qu'elles soient dans le produit ou placées en entreposage. Si une batterie n'a pas été utilisée pendant 6 mois, vérifier l'état de charge et charger ou éliminer la batterie, le cas échéant.

- ♦ Vérifier régulièrement l'état de charge de la batterie
- ♦ Envisager le remplacement de la batterie par une nouvelle en cas de constat d'une des conditions suivantes :
 - L'autonomie de la batterie descend en dessous d'environ 80 % de son autonomie initiale
 - Le temps de charge de la batterie augmente sensiblement

8.2 Chargement des batteries au lithium-ion

This section describes charging precautions and provides an overview of the battery charger.

8.2.1 Précautions de chargement

Respecter les précautions de chargement suivantes :

- ♦ Avant de la charger, inspecter la batterie pour détecter les signes éventuels de dommages sur le boîtier ou les connecteurs susceptibles de créer un court-circuit.
- ♦ La batterie peut être chargée dans la plage de température de 0°C à +45°C. En cas de chargement de la batterie en dehors de cette plage, la batterie peut devenir très chaude ou se rompre.
- ♦ Être absolument sûr de l'utilisation d'une source de 5 V lors du chargement de la batterie.
- ♦ Prendre soin de charger les batteries sur une surface ininflammable.
- ♦ Ne pas charger les batteries à proximité d'objets ou de liquides inflammables.
- ♦ Conserver un extincteur à poudre chimique de classe C à proximité.
- ♦ Ne pas continuer de recharger la batterie si elle ne se recharge pas dans le temps de chargement spécifié.
- ♦ NE JAMAIS laisser une batterie au lithium-ion sans surveillance lorsqu'elle est en train de charger.

8.2.2 Chargeur de batterie

Le chargeur de batterie au lithium-ion est conçu pour fonctionner à partir d'une ligne de service simple 120 V c.a., 10 A.

Le bloc d'alimentation servant à charger le bloc-batterie fournit une tension régulée de 5 V c.c.

TBD

Legal Information

A.1 FCC Rules and Regulations Compliance

The Federal Communications Commission (FCC) regulates the use of antennas in the “Code of Federal Regulations – Title 47, Part 15 – Radio Frequency Devices, Subpart C – Intentional Radiators, Section 15.203 Antenna Requirement.”

NOTE

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

When used as intended, the RT 1000 complies with FCC Section 15.203 requirements as follows:

- ◆ The RT 1000 antennas shall be installed and handled by professionals specifically designated for this purpose.
- ◆ Changes or modifications not expressly approved by Wireless Seismic, Inc. can void the users's authority to operate the equipment.
- ◆ The RT 1000 shall be used with only the supplied antennas (*Table A–1*) attached to the WRU or BSU with an integrated type N male connector.

Table A–1 Antenna Specifications

Model	Frequency (MHz)	Gain	Vertical Bandwidth	Weight	Dimension (Length x Diameter)
WSI 65-0067	2400-2485	9 dBi	14°	0.8 lbs 0.5 kg	27 x 0.6 in 690 x 15 mm
WSI 6060-001-01	2400-2485	7 dBi	18°	0.6 lbs 0.3 kg	21 x 0.6 in 540 x 15 mm

Table A-1 Antenna Specifications (cont.)

Model	Frequency (MHz)	Gain	Vertical Bandwidth	Weight	Dimension (Length x Diameter)
WSI 65-0023	2400-2485	5 dBi	25°	0.5 lbs 0.2 kg	12 x 0.6 in 355 x 15 mm
WSI 65-0025	2400-2485	2 dBi @ 2.4	120°	1.6 oz 45.4 g	7.6 x 0.5 in 193 x 12.7 mm

**WARNING**

In order to comply with FCC radio frequency (RF) exposure requirements, the RT 1000 units must be installed so that a minimum separation distance of 20 cm is maintained between the antenna(s) and all persons at all times during normal operation.

The Base Station Unit has been granted FCC equipment authorization under the FCC Identifier YZO-00400.

The Wireless Remote Unit has been granted FCC equipment authorization under the FCC Identifier YZO-00100.

A.2 Industry Canada Compliance

The Base Station Unit has been granted Industry Canada (IC) approval and certification per RSS-210 Issue 8 and RSS-102 Issue 4 as:

- ◆ 1Mbps BSU: Model number 10-0009, IC: 10081A-WSI00401

The Wireless Remote Unit has been granted Industry Canada (IC) approval and certification per RSS-210 Issue 8 and RSS-102 Issue 4 as:

- ◆ 1Mbps WRU: Model number 10-0001, IC: 10081A-WSI00101
- ◆ 5Mbps WRU: Model number 10-0017, IC: 10081A-WSI00102

**NOTE**

You cannot mix 1Mbps WRUs and 5Mbps WRUs in the same spread. You must use all of the same type.

l'information juridique

B.1 Conformité avec les règles et règlements de la FCC

La Federal Communications Commission (FCC) réglemente l'utilisation d'antennes dans l'article suivant : Code of Federal Regulations – Title 47, Part 15 – Radio Frequency Devices, Subpart C – Intentional Radiators, Section 15.203 Antenna Requirement.

REMARQUE

Cet équipement a été testé et jugé conforme aux limites fixées pour un appareil numérique de classe A, conformément à la partie 15 des règles de la FCC. Ces limites sont conçues pour fournir une protection raisonnable contre les interférences nuisibles lorsque l'équipement est utilisé dans un environnement commercial. Cet équipement génère, utilise et peut émettre l'énergie des fréquences radio et, s'il n'est pas installé et utilisé conformément au mode d'emploi, peut causer des interférences nuisibles avec les communications radio. Le fonctionnement de cet équipement dans une zone résidentielle est susceptible de provoquer des interférences nuisibles, auquel cas l'utilisateur devra corriger les interférences à ses propres frais.

Lorsqu'il est utilisé comme prévu, le RT 1000 respecte les conditions de l'article 15.203 de la FCC de la manière suivante :

- ♦ Les antennes du RT 1000 doivent être installées et manipulées par des professionnels spécifiquement désignés pour cela.
- ♦ Les changements ou modifications non expressément approuvés par Wireless Seismic, Inc. peuvent annuler l'autorisation de l'utilisateur d'utiliser l'équipement.
- ♦ Le RT 1000 doit être utilisé uniquement avec les antennes fournies (*Tableau B-1*) branchées à l'unité distante sans fil ou à la station de base à l'aide d'un connecteur mâle de type N intégré.

Tableau B-1 Spécifications des antennes

Modèle	Fréquence (MHz)	Gain	Largeur de bande verticale	Poids	Dimensions (Longueur x Diamètre)
WSI 65-0067	2400-2485	9 dBi	14°	0,8 lb 0,5 kg	27 x 0,6 po 690 x 15 mm

Tableau B-1 Spécifications des antennes (cont.)

Modèle	Fréquence (MHz)	Gain	Largeur de bande verticale	Poids	Dimensions (Longueur x Diamètre)
WSI 6060-001-01	2400-2485	7 dBi	18°	0,6 lb 0,3 kg	21 x 0,6 po 540 x 15 mm
WSI 65-0023	2400-2485	5 dBi	25°	0,5 lb 0,2 kg	12 x 0,6 po 355 x 15 mm
WSI 65-0025	2400-2485	2 dBi à 2,4	120°	1,6 oz 45,4 g	7,6 x 0,5 po 193 x 12,7 mm

**AVERTISSEMENT**

Afin de se conformer aux normes de la FCC en matière d'exposition aux radiofréquences (RF), les unités RT 1000 doivent être installées de manière à garder en permanence une distance minimale de 20 cm entre la ou les antennes et toute personne en mode de fonctionnement normal.

La station de base a reçu l'autorisation d'équipement de la FCC sous l'identifiant YZO-00400.

L'unité distante sans fil a reçu l'autorisation d'équipement de la FCC sous l'identifiant YZO-00100.

B.2 Industrie Canada Conformité

La station de base a reçu l'approbation et la certification d'Industrie Canada (IC) par rapport à CNR-210 8^e édition et CNR-102 4^e édition :

- ◆ 1Mbps BSU
 - Numéro de modèle : 10-0009
 - Numéro de certification IC : IC: 10081A-WSI00401

L'unité distante sans fil a reçu l'approbation et la certification d'Industrie Canada (IC) par rapport à CNR-210 8^e édition et CNR-102 4^e édition :

- ◆ 1Mbps WRU
 - Numéro de modèle : 10-0001
 - Numéro de certification IC : IC: 10081A-WSI00101
- ◆ 5Mbps WRU
 - Numéro de modèle : 10-0017
 - Numéro de certification IC : IC: 10081A-WSI00102

Fluidmesh Radio Specifications

The information in this chapter is reproduced here for your convenience from the Fluidmesh data sheet available at the following location:

http://www.fluidmesh.com/press-room/product-literature/doc_details/160-fluidmesh-mito-series

© 2005-2010 Fluidmesh Networks, Inc. (90-0012)

C.1 The Fluidmesh Mito Series

The Fluidmesh® MITO Series is a MIMO-based tri-band wireless Ethernet product line designed and manufactured specifically for multi-service backhaul applications.

MITO - The Revolution in Wireless Backhauling

With the MITO product line, Fluidmesh has developed a revolutionary wireless backhaul solution that is capable of offering extreme performances with a small form factor. MITO is a unique 2x2 MIMO solution with integrated directional antennas which has allowed Fluidmesh to break the mould and create a product line that is a game changer in the wireless backhauling arena. You won't need to install external antennas. You won't need to deal with coaxial cables, lightning suppressors, and grounding. The Fluidmesh

1100 MITO and the Fluidmesh 3100 MITO have an integrated radio-antenna solution with an outdoor rated enclosure that is slightly bigger than two decks of cards. The Fluidmesh 1100 MITO mounts a 2x2 MIMO patch antenna and can be used to create point to point, point to multipoint, and mesh networks providing unparalleled performances and a compact form factor. The Fluidmesh 3100 MITO mounts a 2x2 MIMO sector antenna and is designed for medium and large point to multipoint deployments with up to 150 clients.

Tri-band Radio operating at 4.9 GHz, and 5.1-5.8 GHz

The Fluidmesh MITO Series features one tri-band radio and can operate at 4.9 GHz, and 5.1-5.8 GHz and modulate up to 300 Mbps. The preferred frequency can be easily selected through a web based interface.

Optimized Prodigy Transmission Protocol for maximum Reliability

The Fluidmesh MITO Series employs Prodigy, Fluidmesh's proprietary high performance 'intelligent' transmission protocol, built to overcome the limits of standard license-free protocols and to deliver a wireless infrastructure with a higher level of reliability. Prodigy was developed to transmit any IP-compatible

traffic including data, video, and voice. At the base of our innovative transmission protocol, there is a traffic optimization algorithm that allows every Fluidmesh device to assign a specific level of priority and reliability to every packet transmitted. This process allows the wireless network to automatically adjust its transmission parameters based on the type of traffic transmitted. The overall result is a better, more reliable, multi-service wireless infrastructure.

Compact Design for Easy Installation

The Fluidmesh MITO Series has a compact form factor designed for low visual impact deployments. The integrated panel antenna makes for easy installation and supports a range of up to 30 miles in line of sight. The provided low-power POE injector guarantees a straight-forward set-up.

FluidThrottle™

The Fluidmesh MITO Series is based on the innovative FluidThrottle™ technology which allows the user to limit the total cost of ownership of the wireless network by paying only for the amount of bandwidth required. Additional throughput can be easily achieved by upgrading the system with software plug-ins in case the bandwidth requirements increase over time. This solution makes Fluidmesh the most cost-effective and flexible wireless solution provider in the market.

FluidMAX™

The Fluidmesh MITO Series supports the patent-pending FluidMAX™ technology and can be used to create Point-to-Point, Point-to-Multipoint, and Mesh architectures. Thanks to FluidMAX™, the Fluidmesh MITO Series can operate with a centralized medium access control protocol, or with a distributed medium access control protocol, depending on the network layout. That means that our units can operate in either CSMA or TDMA. The decision is made automatically by the network based on its layout and requires no user intervention.

EasyMesh® Platform and FMQuadro Interface

The Fluidmesh MITO Series includes EasyMesh™. The EasyMesh technology allows the user to set the same range of private IP addresses across the entire network. The Fluidmesh MITO Series also includes the FMQuadro™ web interface which allows the user to configure, monitor, and troubleshoot the wireless network in real time without the need of additional software or a server. The unit comes with a built-in spectrum analyzer, a real-time bandwidth monitoring tool, and a wizard to facilitate the configuration of the system.

AES-128 Encryption Support (FIPS-197 Compliant)

The Fluidmesh MITO Series includes support for 128 bit AES Encryption at the link-level which can be used for FIPS-197 compliance. Because AES Is Implemented in hardware, there is no loss in terms of performance when AES is enabled.

Simple Network Management Protocol (SNMP) Support

The Fluidmesh MITO Series supports SNMP version 3. The Simple Network Management Protocol allows the user to centrally manage the mesh devices with a SNMP server and to receive automatic alarms in case of network failure.

C.2 Fluidmesh 1100 with MITO Technology

RADIO

- ◆ Frequency Bands: 5.15-5.25 and 5.725-5.825 GHz (US, FCC)
5.470-5.725 GHz (Europe, ETSI)
4.940 - 4.990 GHz (US,FCC)
- ◆ Modulation: OFDM (BPSK, QPSK, 16-QAM, 64-QAM)
- ◆ Modulation speed: Up to 300 Mbps
- ◆ TX Power: Up to 27 dBm, depending on configuration and regulatory constraints
- ◆ AX Sensitivity 5GHz: -96dB@6.5Mbps; -75dB@300Mbps
- ◆ Antenna Type: 2x2 MIMO
- ◆ Antenna Gain: 14.6-16.1 dBi
- ◆ Antenna Polarization: Dual Linear
- ◆ Cross-pol Isolation: 22dB minimum
- ◆ Max VSWR: 1.6:1
- ◆ H-pol Beamwidth: 43 deg.
- ◆ V-pol Beamwidth: 41 deg.
- ◆ Elevation Beamwidth: 15 deg.

ELECTRICAL

- ◆ Power input: Passive PoE 15V DC,
0.8A, (pairs 4,5+; 7,8 return)
- ◆ Power consumption: Max 8W
- ◆ Power over Ethernet Injector: Included, 90/260V 50/60 Hz AC input

ENVIRONMENTAL

- ◆ Operating Temperature: -30°C to +80°C
- ◆ Storage Temperature: -30°C to +80°C
- ◆ Humidity: 95% condensing
- ◆ Weather Rating: IP65
- ◆ Wind Survivability: 120 mph
- ◆ Shock & Vibration: ETSI 300-019-1.4

PHYSICAL

- ◆ Interfaces: Two (2) Internal Ethernet
10/100BaseT autosensing, RJ45
- ◆ Dimensions (mm): 294 (h) X 80 (w) X 30(d)
- ◆ Weight (Kg): 0.4
- ◆ Enclosure material: Outdoor UV Stabilized Plastic

OPTIONAL SOFTWARE PLUG-INS

- ◆ Ethernet Capacity Plug-in up to 1 Mbps (included)
- ◆ Ethernet Capacity Plug-in up to 2.5 Mbps
- ◆ Ethernet Capacity Plug-in up to 5 Mbps
- ◆ Ethernet Capacity Plug-in up to 10 Mbps
- ◆ Ethernet Capacity Plug-in up to 30 Mbps
- ◆ Ethernet Capacity Plug-in up to 60 Mbps
- ◆ Unlimited Wired Ethernet Capacity Plug-in (up to 100 Mbps)
- ◆ 802.1Q VLAN Support
- ◆ AES-128 Encryption

C.3 Fluidmesh 3100 with MITO Technology

RADIO

- ◆ Frequency Bands: 5.15-5.25 and 5.725-5.825 GHz (US, FCC)
5.470-5.725 GHz (Europe, ETSI)
4.940 - 4.990 GHz (US,FCC)
- ◆ Modulation: OFDM (BPSK, QPSK, 16-QAM, 64-QAM)
- ◆ Modulation speed: Up to 300 Mbps
- ◆ TX Power: Up to 27 dBm, depending on configuration and regulatory constraints
- ◆ AX Sensitivity 5GHz: -96dB@6.5Mbps; -75dB@300Mbps
- ◆ Antenna Type: 2x2 MIMO
- ◆ Antenna Gain: 14.6-17.1 dBi
- ◆ Antenna Polarization: Dual Linear
- ◆ Cross-pol Isolation: 22dB minimum
- ◆ Max VSWR: 1.5:1
- ◆ H-pol Beamwidth: 72 deg.
- ◆ V-pol Beamwidth: 93 deg.
- ◆ Elevation Beamwidth: 8 deg.

ELECTRICAL

- ◆ Power input: Passive PoE 24V DC,
1A, (pairs 4,5+; 7,8 return)
- ◆ Power consumption: Max 8W
- ◆ Power over Ethernet Injector: Included, 90/260V 50/60 Hz AC input

ENVIRONMENTAL

- ◆ Operating Temperature: -30°C to +75°C

C. Fluidmesh Radio Specifications

MITO Series General Characteristics

- ◆ Storage Temperature: -30°C to +75°C
- ◆ Humidity: 95% condensing
- ◆ Weather Rating: IP65
- ◆ Wind Survivability: 120 mph
- ◆ Shock & Vibration: ETSI 300-019-1.4

PHYSICAL

- ◆ Interfaces: One (1) Internal Ethernet
10/100BaseT autosensing, RJ45
- ◆ Dimensions (mm): 370 (h) X 80 (w) X 70(d)
- ◆ Weight (Kg): 1.6
- ◆ Enclosure material: Anodized Aluminum

OPTIONAL SOFTWARE PLUG-INS

- ◆ Ethernet Capacity Plug-in up to 10 Mbps
- ◆ Ethernet Capacity Plug-in up to 30 Mbps
- ◆ Ethernet Capacity Plug-in up to 60 Mbps
- ◆ Unlimited Wired Ethernet Capacity Plug-in (up to 100 Mbps)
- ◆ 802.1Q VLAN Support
- ◆ AES-128 Encryption

C.4 MITO Series General Characteristics

NETWORK

- ◆ Protocols: UDP, TCP, IP, RTP, RTCP, RTSP, HTIP, HTIPS, ICMP, ARP
- ◆ Medium Access Control (MAC) Protocols: Centralized Polling-based, Distributed CSMA/CA-based
- ◆ Web-based interface for remote management
- ◆ Multicast support
- ◆ UPnP support
- ◆ NMP support
- ◆ 802.1Q VLAN Support

SECURITY

- ◆ Full VPN compatibility
- ◆ Full compatibility with all encryption and authentication standards (AES, 3DES, RSA, HTIPS, SSL, etc.)
- ◆ AES-128 (FIPS-197 Compliant) Link-level Encryption

APPROVALS

- ◆ FCC CFR 47 Part 15, class B
- ◆ Industry Canada RSS 210

- ◆ CEI!

SUPPLIED ACCESSORIES

- ◆ PoE Injector with US/EU/UK Power Cord
- ◆ Pole Mounting Kit (i.e. Pole Mounting Kit Max O.D. 2 in.)

WARRANTY

- ◆ Two (2) years on parts and labor
- ◆ Three (3) years optional extended warranty plan with advanced replacement
- ◆ Five (5) years optional extended warranty plan with advanced replacement

LED Indicators

This chapter provides the possible LED status and error indicators for WRUs and BSUs.

Table D-1 WRU LED Status Indications

LED Indicators	Summary	Description
	Undeployed	No lights are on; the unit is undeployed.
	Geo Down Tilt Detected	All LEDs are on solid
	Battery test in progress	Flashing: • MODE • BAT
	Battery A in use	A flashing

Table D-1 WRU LED Status Indications (cont.)

LED Indicators	Summary	Description
	Self test in progress	Flashing: • MODE • BAT • GEO • GPS • RAD
	Geophone test in progress	Flashing: • MODE • GEO
	Acquiring GPS fix	Flashing: • MODE • GPS
	Neighbor discovery in progress	Flashing: • MODE • RAD
	Neighbor discovered	Flashing: • A • MODE • B
	Continue (lay flat to move to next test)	Solid: • MODE • GEO • GPS NOTE: To skip a test during the self-test process, tilt the unit vertical (geophone down) until you see this triangle of LEDs. Tilt the unit back to horizontal to continue.

Table D-1 WRU LED Status Indications (cont.)

LED Indicators	Summary	Description
	Sleeping	RAD flashing

Error LEDs remain persistent throughout the self-discovery process and are turned off upon completion. If certain self-tests fail, it is possible that the WRU will power down.

If a WRU self test fails, the WRU will continue to the next test.

You can skip a self-test by tipping the WRU geophone down and then returning it to the upright position (flat on the ground).

Table D-2 WRU LED Error Indications

LED Indicators	Summary	Description
	Single battery failure (B)	A flashing Solid: - B - BAT
	Single battery failure (A)	B flashing Solid: - A - BAT
	Both batteries failure	Solid: - A - B - BAT

Table D-2 WRU LED Error Indications (cont.)

LED Indicators	Summary	Description
	Self test failure	Solid: - BAT - GEO - GPS - RAD
	Geophone failure	GEO solid
	No GPS fix	GPS solid GPS fix within 10 m within 1 min not found
	No neighbor detected	RAD solid If this is the first WRU deployed, this is the expected condition.

Table D-3 BSU LED Discipline Indications

LED Indicators	Summary	Description
	Disciplining to radio	Flashing: - A - RAD

Table D-3 BSU LED Discipline Indications (cont.)

LED Indicators	Summary	Description
	Disciplining to GPS	Flashing: - A - GPS
	Disciplining	A flashing
	Disciplined to radio	Flashing: - B - RAD
	Disciplined to GPS	Flashing: - B - GPS
	Disciplined	B flashing
	Incorrectly dropped out of cycle mode	Flashing: - A - B - BAT - RAD

Table D-3 BSU LED Discipline Indications (cont.)

LED Indicators	Summary	Description
	Armed	MODE flashing

Weighted Mast

This section describes the mast that uses weights to maintain stability.

E.1 Specifications

Tripod Weight = 50 lbs (22.73 kg)

Minimum mast height = 53" (includes 6" for mounting)

Base size = 48" (1.2m) x 48" (1.2m)

Supports up to 12 – 16" x 8" blocks

Pre-galvanized steel frame

Accepts up to 2.5" mast (not included)

Figure E-1 Weighted Mast

E.2 Hardware Supplied

The following hardware is supplied with the tripod mast:

- ◆ 4 - Bolt, Carriage 1/4 - 20 x 3/4"
- ◆ 12 - Bolt, Carriage 1/4 - 20 x 5/8"
- ◆ 4 - Bolt, 1/4 - 20 x 3/4" Hex Head
- ◆ 4 - Bolt, 1/4 - 20 x 1/2" Hex Head
- ◆ 24 - Nut, 1/4 - 20
- ◆ 24 - Lock washer, 1/4 Int. tooth

E.3 Assembly Instructions

This section provides instructions and illustrations for assembly of the tripod.

Figure E-2 Tripod Assembly – Front View

To assemble the tripod:

- 1 Assemble one 244 Flange to the Center Support Plate using four 1/4-20 x 3/4" carriage Bolts, Lock washers and Hex Nuts. Make sure to assemble the Bolts with the Heads on the underside of the frame. Hex Nut should be on the top side of the frame.
- 2 Assemble Base Frame and Center Support Plate using twelve 1/4-20 x 5/8" carriage Bolts, Lock washers and Hex Nuts. Make sure to assemble the Bolts with the Heads on the underside of the frame. Hex Nut should be on the top side of the frame.
- 3 Assemble the four (4) Braces to the upper support flange using four 1/4-20x3/4 Hex Head Bolts, Lock washers and Nuts.
- 4 Assemble the other end of the braces to the base frame using the four (4) 1/4-20 x 1/2" Hex Head Bolts, Lock washers, and Nuts.
- 5 Insert Bolts into upper and lower flange.
- 6 Slide the mast (not included) into position and tighten securely and weigh.
