**Class A Commercial Product Justification**

The BK8000 wireless video boroscope is specifically designed for industrial and automotive applications; the unit will not be marketed to the general public. The normal distribution channel is via the Snap-on franchisee network which consists of trucks that serve trained and certified automotive technicians. The unit will also be available for purchase through the Commercial and Industrial group that markets to customers in the industrial segment.

This unit is unique in that the imager head size, configuration, and focal range are configured specifically to suit internal inspection of combustion engines, braking systems etc..., and will be sold with an MSRP of around \$1000.

Regards

Andrew Donaldson  
Project Manager
