

RF EXPOSURE ANALYSIS

<u>Product</u>	<u>FCC ID</u>
Remote Control	Z3I9101A

The product is a remote control for controlling different functions of audio amplifiers.

This device is hand held device.

The equipment transmits in the 2 440 MHz frequency.

Output power considerations:

Max. E.I.R.P value: -13.75 dBm = 0.042 mW

Result:

Device is low power radiator and the RF field which it generates is very low with low duty cycle. Therefore exposure to the radiated field is minor. Therefore it can be considered to comply with the requirements of FCC to RF exposure.
