Can you please explain how the EUT meets the requirements of KDB594280 section B.1.(a) through (c) for WiFi Channels 12 & 13?

Resposne: As shown in the test report (in exhibit 12) the EUT WLAN functionality operates in a mode compliant with the U.S. requirements by transmitting at the lowest possible power level settings via channels 12 and 13. The .INI file saved internally to the EUT controls this. To satisfy KDB594280, conducted output power, band edge, and spurious emission data has been provided to show compliance.
