

# eZ430-Chronos Quick Start

Congratulations on receiving your eZ430-Chronos, the world's first wearable wireless development tool. Complete the following steps to get your watch up and running.

1. Run **Chronos-setup.exe** to install the software and drivers.
2. Insert the RF Access Point into an available USB port.
3. Open the eZ430-Chronos Control application to configure the watch. You will be able to sync the time with your PC, control PowerPoint slides wirelessly, plot your acceleration data and more
4. In order to reprogram the Chronos watch, you will need to disassemble the watch and connect to the included eZ430 emulator.

Find all of the software and documentation online at [www.ti.com/chronoswiki](http://www.ti.com/chronoswiki). Refer to the eZ430-Chronos User Guide for detailed installation instructions, schematics and troubleshooting.

# eZ430-Chronos Quick Start

The eZ430-Chronos has to be disassembled and removed from the enclosure to reprogram with custom applications. You can use the included screwdriver to remove the module.

## Disassembly

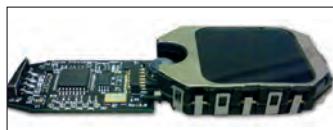

1. Remove metal back using included screwdriver.
2. Carefully remove the watch module.

3. Remove the battery.

4. Connect to eZ430 emulator.

## Reassembly

1. Gently insert the watch module.

2. Ensure that metal strips on watch module slide over buttons.

3. Replace the back with screws.
