Excellence in Compliance Testing

Certification Test Report

FCC ID: Z9O-FAS1538
IC: 10060A-FAS1538

FCC Rule Part: 15.209
IC Radio Standards Specification: RSS-210

ACS Report Number: 14-2068.W06.1A

Manufacturer: UltraClenz, LLC
Model(s): FAS1538-00, FAS1538-01, FAS1538-02

Test Begin Date: **July 8, 2014**
Test End Date: **October 24, 2014**

Report Issue Date: December 3, 2014

ACCREDITED TESTING

FOR THE SCOPE OF ACCREDITATION UNDER CERTIFICATE NUMBER AT-1533

This report must not be used by the client to claim product certification, approval, or endorsement by ACLASS, ANSI, or any agency of the Federal Government.

TABLE OF CONTENTS

1 GENERAL

1.1 Purpose

The purpose of this report is to demonstrate compliance with Part 15 Subpart C of the FCC's Code of Federal Regulations and Industry Canada's Radio Standards Specification RSS-210.

1.2 Product Description

The models FAS1538-00, FAS1538-01, FAS1538-02 are hospital bed beacons. These models are identical except for the color of the enclosure. They include three transceivers operating at 125 kHz, 433 MHz and 2405 MHz, respectively. These beacons are part of UltraClenz's patient safeguard system insuring proper hygiene of healthcare workers when approaching patient's bed. They wake-up a badge within a close range, collect the badge's ID via 2.4GHz and transmit it to 433 MHz network.

Technical Details
Frequency of Operation: 126 kHz
Number of Channels: 1
Modulation: OOK
Data Rate: 2.4 kbps
Antenna: Magnetic Loop Antenna
Input Voltage: 3 VDC (Size D Battery)

Manufacturer Information:
UltraClenz, LLC
1201 Jupiter Park Drive
Jupiter, FL 33458

Test Sample Serial Number(s): 1419-001A-000285

Test Sample Condition: Good

1.3 Test Methodology and Considerations

The FAS1538-02 was evaluated for radiated emissions for the 125 kHz transmitter and was deemed to be representative of all the other models. The 125 kHz radio does not transmit simultaneously with the 433 MHz and the 2405 MHz co-located radios, per the customer's theory of operation. Therefore, the 125 kHz radio was not evaluated for inter-modulation products with the co-located 433 MHz and 2405 MHz radios.

Preliminary evaluations were performed for the unit set in 3 orthogonal orientations corresponding to the positions of typical installation. The results are reported for the configuration leading to the highest emissions.

The 433 MHz and 2405 MHz transmitters are assessed in their respective certification test reports. The unintentional emissions evaluation is documented separately in a verification test report.

2 TEST FACILITIES

2.1 Location

The radiated and conducted emissions test sites are located at the following address:

Advanced Compliance Solutions, Inc.
3998 FAU Blvd, Suite 310
Boca Raton, Florida 33431
Phone: (561) 961-5585
Fax: (561) 961-5587
www.acstestlab.com

FCC Test Firm Registration #: 475089
Industry Canada Lab Code: 4175C

2.2 Laboratory Accreditations/Recognitions/Certifications

ACS is accredited to ISO/IEC 17025 by ANSI-ASQ National Accreditation Board under their ACLASS program and has been issued certificate number AT-1533 in recognition of this accreditation. Unless otherwise specified, all test methods described within this report are covered under the ISO/IEC 17025 scope of accreditation.

2.3 Radiated & Conducted Emissions Test Site Description

2.3.1 Semi-Anechoic Chamber Test Site

The EMC radiated test facility consists of an RF-shielded enclosure. The interior dimensions of the indoor semi-anechoic chamber are approximately 48 feet (14.6 m) long by 36 feet (10.8 m) wide by 24 feet (7.3 m) high and consist of rigid, 1/8 inch (0.32 cm) steel-clad, wood core modular panels with steel framing. In the shielded enclosure, the faces of the panels are galvanized and the chamber is self-supporting. 8-foot RF absorbing cones are installed on 4 walls and the ceiling. The steel-clad ground plane is covered with vinyl floor.

The turntable is driven by pneumatic motor, which is capable of supporting a 2000 lb. load. The turntable is flushed with the chamber floor which it is connected to, around its circumference, with a continuous metallic loaded spring. An EMCO Model 1050 Multi-device Controller controls the turntable position.

A pneumatic motor is used to control antenna polarizations and height relative to the ground. The height information is displayed on the control unit EMCO Model 1050.

The control room is an RF shielded enclosure attached to the semi-anechoic chamber with two bulkhead panels for connecting RF, and control cables. The dimension of the room is 7.3 m x 4.9 m x 3 m high and the entrance doors of both control and conducted rooms are 3 feet (0.91 m) by 7 feet (2.13 m).

A diagram of the Semi-Anechoic Chamber Test Site is shown in Figure 2.3.1-1 below:

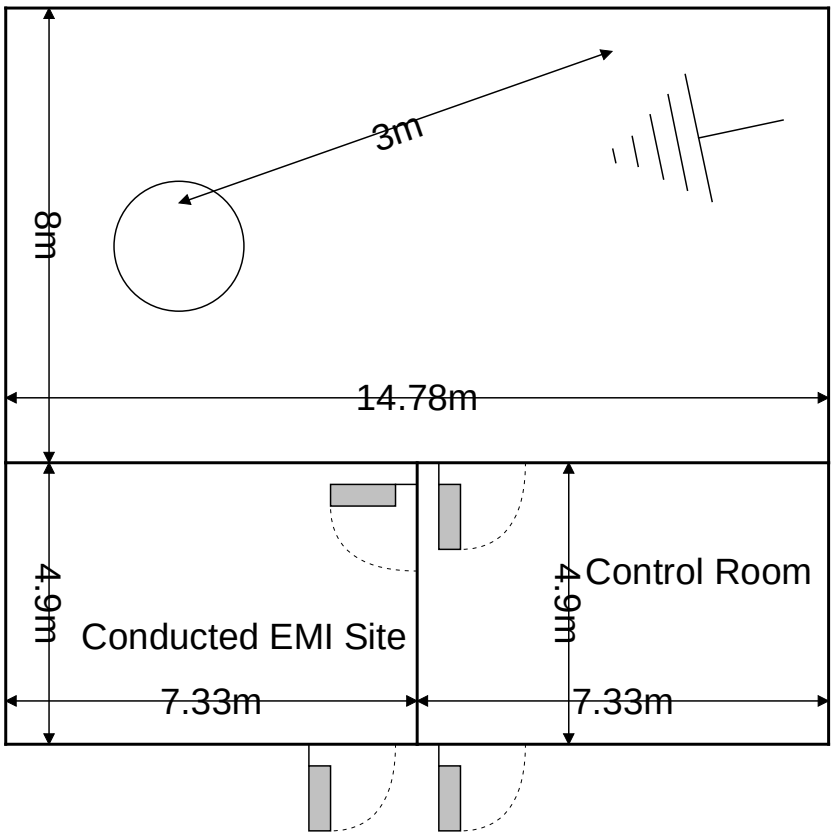

Figure 2.3.1-1: Semi-Anechoic Chamber Test Site

2.3.2 Conducted Emissions Test Site Description

The dimensions of the shielded conducted room are 7.3 x 4.9 x 3 m^3. As per ANSI C63.4 2003 requirements, the data were taken using two LISNs; a Solar Model 8028-50 50 Ω/50 µH and an EMCO Model 3825, which are installed as shown in Photograph 3. For 220 V, 50 Hz, a Polarad LISN (S/N 879341/048) is used in conjunction with a 1 kVA, 50 Hz/220 V EDGAR variable frequency generator, Model 1001B, to filter conducted noise from the generator.

A diagram of the room is shown below in figure 2.3.2-1:

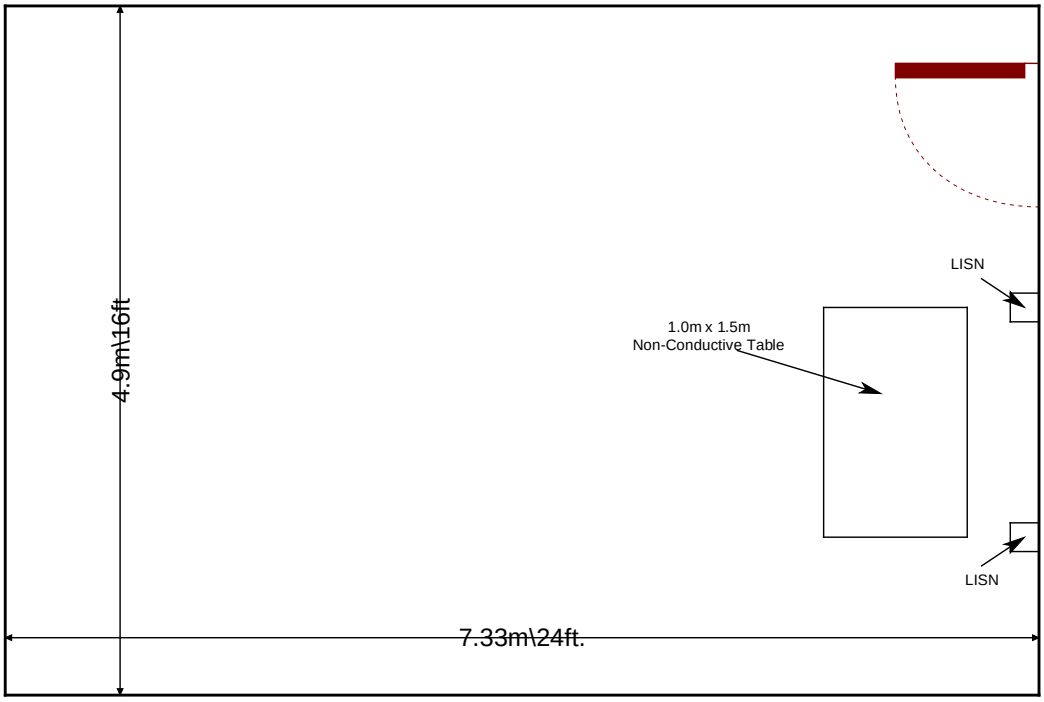

Figure 2.3.2-1: AC Mains Conducted EMI Site

5 SUPPORT EQUIPMENT

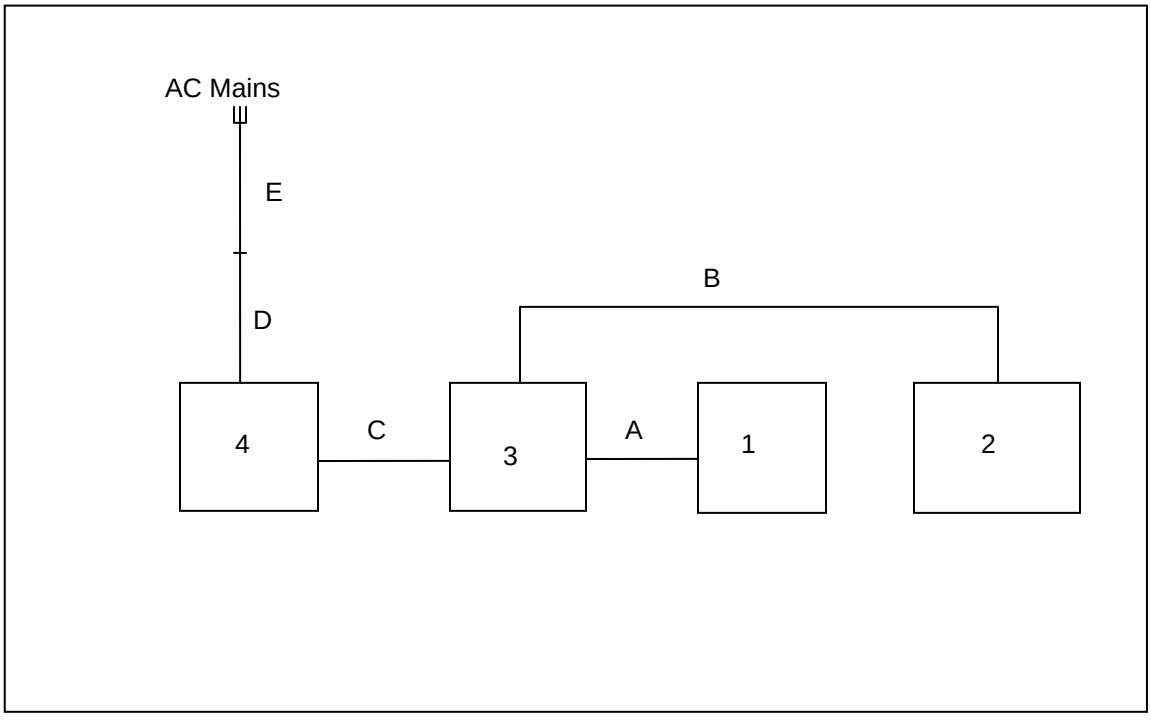
Table 5-1: EUT and Support Equipment

Item #	Type Device	Manufacturer	Model/Part #	Serial #
1	EUT	UltraClenz, LLC	FAS1538-02	1419-001A-000285
2	Bed Antenna	UltraClenz, LLC	FAS1540	P0001
3	Dock	UltraClenz, LLC	FAS1537	N/A
4	Power Sensor	UltraClenz, LLC	FAS1542	N/A

Table 5-2: Cable Description

Cable #	Cable Type	Length	Shield	Termination
A	RJ12 to DIN	1.8m	No	EUT to Dock
B	RJ12	1.73m	No	Antenna to Dock
C	RJ12	2.4m	No	Sensor to Dock
D	Power	1.5m	No	Extension Cord
E	Extension Cord	1.82m	No	Power Cord to AC Mains

6 EQUIPMENT UNDER TEST SETUP BLOCK DIAGRAM



7 SUMMARY OF TESTS

Along with the tabular data shown below, plots were taken of all signals deemed important enough to document.

7.1 Antenna Requirement – FCC: Section 15.203

The EUT utilizes an external coil antenna which uses a 6P6C connector thus meeting the requirements of FCC 15.203.

7.2 20dB / 99% Bandwidth: FCC: Section 15.215 / IC RSS-Gen 6.6

7.2.1 Measurement Procedure

The EUT was rotated through 360° and the receive antenna height was varied from 1m to 4m so that the maximum radiated emissions level would be detected.

The spectrum analyzer span was set to 2 to 5 times the estimated bandwidth of the emission. The RBW was to ≥ 1% to 5% of the estimated emission bandwidth. The trace was set to max hold with a peak detector active. The Delta function of the analyzer was utilized to determine the 20 dB bandwidth of the emission.

The 99% occupied bandwidth was measured with the spectrum analyzer span set to fully display the emission, including the emissions skirts. The RBW was set to 1% to 5% of the estimated 99% bandwidth. The occupied 99% bandwidth was measured by using a delta marker at the lower and upper frequencies leading to 0.5% of the total power.

7.2.2 Measurement Results

Results are shown below in Table 7.2.2-1 and Figures 7.2.2-1 through 7.2.2-2

Table 7.2.2-1: 20dB / 99% Bandwidth

Frequency [MHz]	20dB Bandwidth [kHz]	99% Bandwidth [kHz]
0.125	14.100	21.825

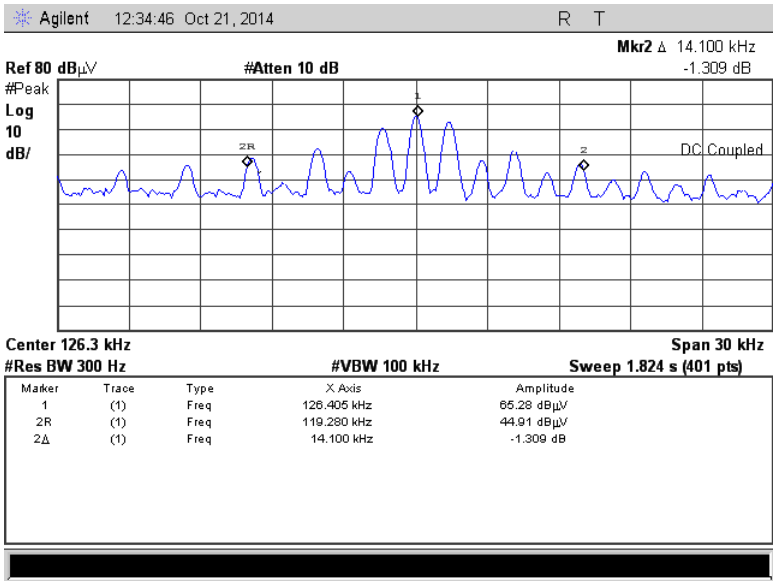


Figure 7.2.2-1: 20dB BW

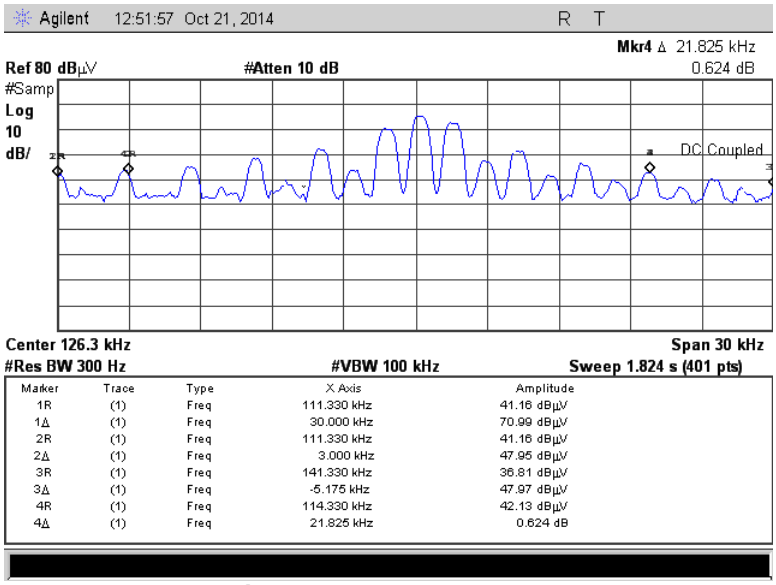

Figure 7.2.2-2: 99% OBW

7.3 Radiated Spurious Emissions – FCC: Section 15.209 / IC: RSS-210 2.5

7.3.1 Measurement Procedure

Radiated emissions tests were made over the frequency range of 10 kHz to 1GHz. Section 15.33(a)(4) specifies, if the intentional radiator contains a digital device, regardless of whether this digital device controls the functions of the intentional radiator or the digital device is used for additional control or function purposes other than to enable the operation of the intentional radiator, the frequency range shall be investigated up to frequency specified in 15.33(b)(1) for unintentional radiators. The upper frequency range for the digital device is 1000MHz which greater than the 10_{th} harmonic of the fundamental frequency. The upper frequency range measured was 1000MHz.

Measurements below 30MHz were performed in a semi-anechoic chamber with a 3 meter separation distance between the EUT and measurement antenna. The EUT was rotated 360 and the loop antenna rotated about the vertical axis to maximize each emission. The magnetic loop receiving antenna was positioned with its center 1 meter above the ground.

The spectrum analyzer's resolution and video bandwidths were set to 300 Hz and 1000 Hz respectively for frequencies below 150 kHz and 9 kHz and 30 kHz respectively for frequencies above 150 kHz and below 30 MHz. The fundamental levels were measured using a resolution bandwidth of 30 kHz which is greater than the measured emission bandwidth. For measurements in the frequency bands 9-90 kHz and 110-490 kHz, an average detector was used. When average measurements are specified, the peak emissions were also compared to a limit corresponding to 20 dB above the maximum permitted average limit according to Part 15.35. All other emissions were measured using a Quasi-peak detector. The final measurements were then corrected by antenna correction factors and cable loss for comparison to the limits.

Measurements above 30 MHz were performed in a semi-anechoic chamber with a 3 meter separation distance between the EUT and measurement antenna. The EUT was rotated through 360° and the receive antenna height was varied from 1m to 4m so that the maximum radiated emissions level would be detected. For frequencies below 1000 MHz, quasi-peak measurements were made using a resolution bandwidth (RBW) of 120 kHz and a video bandwidth (VBW) of 300 kHz.

7.3.2 Distance Correction for Measurements Below 30 MHz – Part 15.31

Radiated measurements were performed at a distance closer than 300 meters and 30m as required, according to Part 15.209. Therefore a correction factor was applied to account for propagation loss at the specified distance. The propagation loss was determined by using the square of an inverse linear distance extrapolation factor (40dB/decade) according to 15.31. A sample calculation of the distance correction factor is shown below for limits expressed at a 300m measurement distance and a 30m measurement distance.

Distance correction factor (300m Specified Test Distance) = 40*Log (Test Distance/300)
= 40*Log (3/300)
= - 80 dB

Distance correction factor (30m Specified Test Distance) = 40*Log (Test Distance/30)
= 40*Log (3/30)
= - 40 dB

7.3.3 Measurement Results

Radiated spurious emissions found in the band of 10 kHz to 1GHz are reported in the Table 7.3.3-1 below.

Table 7.3.3-1: Radiated Spurious Emissions Tabulated Data

Frequency (MHz)	Level (dBuV)		Antenna Polarity	Correction Factors	Corrected Level (dBuV/m)		Limit (dBuV/m)		Margin (dB)	
	pk	avg	(H/V)	(dB)	pk	avg	pk	avg	pk	avg
Fundamental Frequency										
0.12633	72.58	65.39	V	10.66	83.24	76.05	125.6	105.6	42.4	29.6
Emissions below 30 MHz										
0.37899	45.01	33.02	V	10.51	55.52	43.53	116	96	60.50	52.5
0.63165	39.17	33.51	V	10.75	---------	44.26	--------	71.6	---------	27.3
0.75798	36.70	31.73	V	10.70	---------	42.43	--------	70	---------	27.6
1.0406	39.46	35.19	V	10.87	---------	46.06	--------	67.3	---------	21.2
26.9595	27.08	24.06	V	10.03	---------	34.09	--------	69.5	---------	35.4
Emissions above 30 MHz										
30.4847	51.49	49.44	V	-13.80	---------	35.63	--------	40	---------	4.4
34.763	51.34	48.06	V	-14.20	---------	33.86	--------	40	---------	6.1
35.2748	49.33	46.69	V	-14.25	---------	32.44	--------	40	---------	7.6
44.4992	49.33	47.14	V	-15.02	---------	32.11	--------	40	---------	7.9
49.2008	46.61	43.18	V	-15.66	---------	27.53	--------	40	---------	12.5
68.8	53.99	51.26	V	-17.72	---------	33.54	--------	40	---------	6.5
69.1554	54.08	51.67	H	-17.74	---------	33.93	--------	40	---------	6.1
70.95	56.32	53.83	V	-17.88	---------	35.95	--------	40	---------	4.0
111.269	52.10	50.15	V	-15.30	---------	34.85	--------	43.5	---------	8.7
125.241	43.89	39.85	H	-13.83	---------	26.02	--------	43.5	---------	17.5
130.514	49.97	45.76	V	-13.47	---------	32.29	--------	43.5	---------	11.2
153.856	44.62	42.46	V	-12.91	---------	29.55	--------	43.5	---------	14.0
155.024	46.17	41.44	V	-12.88	---------	28.55	--------	43.5	---------	14.9
168.019	40.73	37.11	V	-12.28	---------	24.83	--------	43.5	---------	18.7

Note: The level of the fundamental is corrected for a RBW of 30 kHz which is wider than the emissions bandwidth.

7.3.4 Sample Calculation:

$R_C = R_U + CF_T$

Where:

CF_T	=	Total Correction Factor (AF+CA+AG)-DC (Average Measurements Only)
R_U	=	Uncorrected Reading
R_C	=	Corrected Level
AF	=	Antenna Factor
CA	=	Cable Attenuation
AG	=	Amplifier Gain
DC	=	Duty Cycle Correction Factor

Example Calculation: Peak
Corrected Level: 45.01 + 10.51 = 55.52 dBµV/m
Margin: 116.0 dBµV/m – 55.52 dBµV/m = 60.5 dB

Example Calculation: Average
Corrected Level: 33.02 + 10.51 – 0= 43.53dBµV/m
Margin: 96.0 dBµV/m – 43.53 dBµV/m = 52.5 dB

8 CONCLUSION

In the opinion of ACS, Inc. the FAS1538-00, FAS1538-01, FAS1538-02 manufactured by UltraClenz, LLC meet the requirements of FCC Part 15 subpart C and Industry Canada's Radio Standards Specification RSS-210.
