

The image shows a disassembled Samsung smartphone. On the left is the back cover, which is black and has a silver-colored battery compartment. The battery is a Samsung model ME66N1, with a capacity of 0824.0 mAh and a voltage of 3.8V. A yellow FPC connector is attached to the battery. The front panel is on the right, showing the camera and flash. A ruler is placed vertically on the left side for scale.
