

EMC Test Report

Project Number: 2721158

Report Number: 2721158EMC01

Revision Level: 0

Client: PLUS Location Systems

Equipment Under Test: UWB transmitter

Model Name: Plus Region 1 CR80 Vertical Tag

Model Number: CR80

Applicable Standards: FCC Part 15.250

Report issued on: 12 May 2012

Test Result: Compliant

Tested by:

Brian Forster, EMC Engineer

Reviewed by:

David Schramm, EMC Manager

Remarks:

This report details the results of the testing carried out on one sample, the results contained in this test report do not relate to other samples of the same product. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.

This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards. Any mention of SGS International Electrical Approvals or Testing done by SGS International Electrical Approvals in connection with distribution or use of the product described in this report must be approved by SGS international Electrical Approvals in writing.

1 Summary of Test Results

Reference	Description	Test Result
15.250(a)	10dB bandwidth contained within 5925 to 7250 MHz	Compliant
15.250(b)	10dB bandwidth greater than 50 MHz	Compliant
15.250(d)(1)	Radiated emissions above 960 MHz	Compliant
15.250(d)(2)	Radiated emissions in GPS receive band	Compliant
15.250(d)(3)	Peak emission in a 50 MHz bandwidth	Compliant
15.250(d)(4)	Radiated emissions below 960 MHz per 15.209	Compliant

1.1 *Modifications Required to Compliance*

None

2 General Information

2.1 *Client Information*

Name: Keven Trach
Address: 4955 Corporate Drive Suite 101
City, State, Zip, Country: Huntsville AL 35805

2.2 *Test Laboratory*

Name: SGS North America, Inc.
Address: 620 Old Peachtree Road NW, Suite 100
City, State, Zip, Country: Suwanee, GA 30024, USA

2.3 *General Information of EUT*

Product Name: UWB Transmitter Tag
Model Name: Plus Region 1 CR80 Vertical Tag
Model Number: CR80
Serial Number: 002
Hardware Version: 300-0192 REV A
Voltage: 3Vdc cell / CR2354

Sample Received Date: April 18, 2012
Dates of testing: April 18 to May 12, 2012

2.4 *Operating Modes and Conditions*

The EUT was programmed by the manufacturer to run continuously exercising all modes of operation.

3 UWB Bandwidth requirements

3.1 Test Result

Test Description	Reference	Test Result
10dB bandwidth contained within 5925 to 7250 MHz	15.250(a)	Compliant
10dB bandwidth greater than 50 MHz	15.250(b)	Compliant

3.2 Test Method

- 1) The –10 dB bandwidth of a device operating under the provisions of this section must be contained within the 5925–7250 MHz band under all conditions of operation including the effects from stepped frequency, frequency hopping or other modulation techniques that may be employed as well as the frequency stability of the transmitter over expected variations in temperature and supply voltage.
- 2) The –10 dB bandwidth of the fundamental emission shall be at least 50 MHz. For transmitters that employ frequency hopping, stepped frequency or similar modulation types, measurement of the –10 dB minimum bandwidth specified in this paragraph shall be made with the frequency hop or step function disabled and with the transmitter operating continuously at a fundamental frequency following the provisions of §15.31(m).
- 3) The –10 dB bandwidth is based on measurement using a peak detector, a 1 MHz resolution bandwidth, and a video bandwidth greater than or equal to the resolution bandwidth.

3.3 Test Site

SGS EMC Laboratory, Suwanee, GA

Environmental Conditions

Temperature: 23.4 to 24.7°C

Relative Humidity: 37 to 47 %

V	6,038.221	6899.05	860.829	Compliant	RMS 1MHz / 3MHz

4 Radiated emissions above 960 MHz

4.1 Test Result

Test Description	Reference	Test Result
Radiated emissions above 960 MHz	15.250(d)(1)	Compliant

4.2 Test Method

Emissions from a transmitter operating under this section shall not exceed the following equivalent isotropically radiated power (EIRP) density levels:

- 1) The radiated emissions above 960 MHz from a device operating under the provisions of this section shall not exceed the following RMS average limits based on measurements using a 1 MHz resolution bandwidth:

Frequency (MHz)	EIRP in dBm	EIRP (dBμV/m) at 3m	EIRP (dBμV/m) at 1m
960–1610	-75.3	19.9	29.4
1610–1990	-63.3	31.9	41.4
1990–3100	-61.3	33.9	43.4
3100–5925	-51.3	43.9	53.4
5925–7250	-41.3	53.9	63.4
7250–10600	-51.3	43.9	53.4
Above 10600	-61.3	33.9	43.4

Because the limits are so low, some bands may have been scanned at a distance closer than 1 meter. If any emissions were detected in these bands, final measurements were made at distance of 1 meter or greater. The actual distance for final measurement was indicated in the measurement data.

5 Radiated emissions in GPS receive band

5.1 Test Result

Test Description	Reference	Test Result
Radiated emissions in GPS receive band	15.250(d)(2)	Compliant

5.2 Test Method

In addition to the radiated emission limits specified in the table in paragraph (d)(1) of this section, transmitters operating under the provisions of this section shall not exceed the following RMS average limits when measured using a resolution bandwidth of no less than 1 kHz:

Frequency (MHz)	EIRP dBm	EIRP (dBμV/m) at 3m	EIRP (dBμV/m) at .1m
1164–1240	-85.3	9.9	19.4

6 Peak Power within a 50 MHz bandwidth

6.1 Test Result

Test Description	Basic Standards	Test Result
Peak Power in a 50 MHz Bandwidth	15.250	Compliant

6.2 Test Method

- 1) There is a limit on the peak level of the emissions contained within a 50 MHz bandwidth centered on the frequency at which the highest radiated emission occurs and this 50 MHz bandwidth must be contained within the 5925–7250 MHz band.
- 2) The peak EIRP limit is $20 \log (RBW/50)$ dBm where RBW is the resolution bandwidth in megahertz that is employed by the measurement instrument. RBW shall not be lower than 1 MHz or greater than 50 MHz. The video bandwidth of the measurement instrument shall not be less than RBW.
- 3) If RBW is greater than 3 MHz, the application for certification filed with the Commission shall contain a detailed description of the test procedure, calibration of the test setup, and the instrumentation employed in the testing.

Limits

Frequency (MHz)	EIRP in 50 MHz BW dBm	EIRP in 50 MHz BW (dBμV/m) at 3m	EIRP in 50 MHz BW (dBμV/m) at .1m
5925 – 7250	0	95.2	104.7

Limits converted to 1 MHz RBW

Frequency (MHz)	EIRP in 1 MHz BW dBm	EIRP in 1 MHz BW (dBμV/m) at 3m	EIRP in 50 MHz BW (dBμV/m) at 1m

7 Radiated emissions below 960 MHz

7.1 Test Result

Test Description	Basic Standards	Test Result
Radiated Emissions	FCC Part 15.250(d)(4) and 15.209	Compliant

7.2 Test Method

The initial preliminary exploratory scans were performed over the frequency range as indicated in the tables below using the max hold function and incorporating a Peak detector and using TILE! software. The final test data was measured using a Quasi-Peak detector below 1GHz and a Peak and Average detector above 1GHz. The receivers resolution bandwidth was set to 120 kHz for measurements taken in the 30MHz to 1GHz frequency range and 1MHz for measurements for 1GHz and higher. Measurements were made with the antenna positioned in both the horizontal and vertical planes of polarization. The antenna height was varied from 1 m to 4 m and the EUT was rotated 360° to find the maximum emitting point for each frequency. The radiated measurements were recorded and compared to the limits indicated in the table below.

Radiated emissions limit below 1 GHz		
Frequency Range(MHz)	Limit(QP dBμV/m)	Distance
30 – 88	40	3m
88 – 216	43.5	3m
216 – 960	46	3m
