

## **The Description of RX3E Circuit**

RX3E is a remote control. The DC/DC module it uses transmits the voltage from 12v to 2.2v to make U2 work,. When you operate “ALARM”, “ON” and “ OFF”, you actually touch off U2 and send out the order. The code gives out the data, they are filtered by 76 Mhz filter, enlarged by U3 and lastly sent out by antenna.
