12. Radio Frequency Exposure

12.1 Applicable Standards

The measurements shown in this test report were made in accordance with the procedures given in FCC Part 2 (Section 2.1093)

Report No.: 21080269-TRFCC01

LIMIT

KDB 447498 D01 § 4.3(a)

For 100 MHz to 6 GHz and test separation distances ≤ 50 mm, the 1-g and 10-g SAR test exclusion thresholds are determined by the following:

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] $[\sqrt{f(GHz)}] \le 3.0$ for 1-g SAR, and ≤ 7.5 for 10-g extremity SAR, where

*f(GHz) is the RF channel transmit frequency in GHz

- * Power and distance are rounded to the nearest mW and mm before calculation
- *The result is rounded to one decimal place for comparison
- *The values 3.0 and 7.5 are referred to as numeric thresholds in step b) below

The test exclusions are applicable only when the minimum test separation distance is ≤ 50 mm, and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is < 5 mm, a distance of 5 mm according to 4.1 f) is applied to determine SAR test exclusion

12.2 EUT Specification

Frequency band	⊠ 2.4GHz: 2402MHz ~ 2480MHz					
(Operating)	☐ Bluetooth: 2402MHz ~ 2480MHz					
Doving antogory	□ Portable (<20cm separation)					
Device category	☐ Mobile (>20cm separation)					
Exposure	Occupational/Controlled exposure					
classification	☐ General Population/Uncontrolled exposure					
Antenna diversity	Single antenna					
	☐ Multiple antennas					
	☐ Tx diversity					
	Rx diversity					
	☐ Tx/Rx diversity					
Evaluation applied	☐ SAR Evaluation					
	⊠ N/A					
Remark:						
4 The man discussion and						
•	out power is <u>-0.32 dBm (0.929mW)</u> at <u>2402MHz</u> (with <u>2.39 dBi</u>					
<u>antenna gain</u> .) 2. DTS device is not subject to routine RF evaluation; MPE estimate is used to justify th						
DTS device is not subject to routine RF evaluation; MPE estimate is used to justify the compliance.						
3. For mobile or fixed location transmitters, no SAR consideration applied.						
o. To modic of fixed location transmitters, no oan consideration applied.

12.3 TEST RESULTS

According to the KDB447498:

The SAR test exclusion thresholds Level:

[(max. power of channel, including tune-up tolerance, mW) /(min. test separation distance, mm)] * sqrt (freq. in GHz) < 3

Report No.: 21080269-TRFCC01

Calculation

Channel Frequency (MHz)	Max. Conducted output power (dBm)	Max. Tune up power (dBm)	Max. Tune up power (mW)	Distance (mm)	SAR test exclusion thresholds (mW)
2402-2480	-0.32	0.18	1.04	5	10.00

Since the source-based time-averaging conducted output power is well below the SAR low threshold level, so the EUT is considered to comply with SAR requirement without testing
