Product Name:	Mobile Phone
Model No.:	RG220,SWIFT PLUS
Trade mark:	RugGear
AC adapter:	Input:100-240V AC,50/60Hz 0.15A Output:5.0V DC MAX1000mA
Power supply:	Rechargeable Li-ion Battery DC3.7V-1800mAh
Remark:	The Model: RG220 and SWIFT PLUS are identical inside, the electrical circuit design, layout, components used and internal wiring, with only difference being model name.

5.3 Test Mode

Operating mode	Detail description
Downloading mode	Keep the EUT in transfer data with Downloading mode (Worst case)
GPS mode	Keep the EUT in GPS receiver mode
Recording mode	Keep the EUT in recording music or video mode
Play mode	Keep the EUT in play music or video mode
FM mode	Keep the EUT in play FM receiver mode

The sample was placed 0.8m above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.

Test Procedure:	<div>1. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.</div> <div>2. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.</div> <div>3. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.</div> <div>4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.</div> <div>5. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</div> <div>6. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.</div>

The spectrum plot displays the signal level in dBuV/m against frequency in MHz. The y-axis ranges from 0 to 80 dBuV/m, and the x-axis ranges from 30 to 1000 MHz. A red stepped line indicates the FCC Part 15 Class B limit, which is 40 dBuV/m from 30 to 80 MHz, 43 dBuV/m from 80 to 215 MHz, 46 dBuV/m from 215 to 1000 MHz, and 54 dBuV/m above 1000 MHz. The blue signal trace shows several peaks, with the highest peak reaching approximately 35 dBuV/m at 215 MHz. The peaks are labeled 1 through 6, corresponding to the following approximate frequencies and levels:
