

RF TEST REPORT

Test item : Multi Band GSM/WCDMA/LTE Phone with Bluetooth, WLAN and NFC
Model No. : LG-D855V, LGD855V, D855V, LG-D855v, LGD855v, D855v
Order No. : DTNC1411-04837
Date of receipt : 2014-11-05
Test duration : 2014-11-06 ~ 2014-11-17
Date of issue : 2014-11-20
Use of report : FCC Original Grant

Applicant : LG Electronics MobileComm U.S.A., Inc.
1000 Sylvan Avenue, Englewood Cliffs NJ 07632

Test laboratory : DT&C Co., Ltd.
42, Yurim-ro, 154beon-gil, Cheoin-gu, Yongin-si, Gyeonggi-do, Korea 449-935

Test specification : FCC Part 22
Test environment : See appended test report
Test result : ☒ Pass ☐ Fail

The test results presented in this test report are limited only to the sample supplied by applicant and the use of this test report is inhibited other than its purpose. This test report shall not be reproduced except in full, without the written approval of DT&C Co., Ltd.

1. GENERAL INFORMATION

Applicant Name: LG Electronics Mobile Comm U.S.A., Inc.

Address: 1000 Sylvan Avenue, Englewood Cliffs NJ 07632

FCC ID : ZNFD855V

FCC Classification : PCS Licensed Transmitter Held to Ear (PCE)

EUT Type : Multi Band GSM/WCDMA/LTE Phone with Bluetooth, WLAN and NFC

Model Name : LG-D855V

Add Model Name : LGD855V, D855V, LG-D855v, LGD855v, D855v
※ 6 models are same mechanical, electrical and functional.
※ The only difference is the model name, which are changed for marketing purpose.

Supplying power : DC 3.8 V

Antenna Type : Internal Antenna
- Type: Built-In type

Mode	Tx Frequency (MHz)	Emission Designator	Modulation	ERP/EIRP	
				Max power(dBm)	Max power(W)
LTE Band 5	829 ~ 844	8M94G7D	QPSK	18.96	0.079
LTE Band 5	829 ~ 844	8M97W7D	16QAM	17.51	0.056
LTE Band 5	826.5 ~ 846.5	4M48G7D	QPSK	18.80	0.076

LTE Band 5	825.5 ~ 847.5	2M70W7D	16QAM	17.64	0.058
LTE Band 5	824.7 ~ 848.3	1M08G7D	QPSK	18.79	0.076
LTE Band 5	824.7 ~ 848.3	1M09W7D	16QAM	17.69	0.059

2. INTRODUCTION

2.1 EUT DESCRIPTION

The Equipment Under Test(EUT) supports Multi Band GSM/WCDMA/LTE Phone with Bluetooth, WLAN and NFC.

2.2. Support equipment

Equipment	Model No.	Serial No.	Manufacturer	Note
Wireless Charger	WCP-310	-	LG	BEJWCP300
-	-	-	-	-

Note: The above equipments were supported by manufacturer.

2.3. MEASURING INSTRUMENT CALIBRATION

The measuring equipment, which was utilized in performing the tests documented herein, has been calibrated in accordance with the manufacturer's recommendations for utilizing calibration equipment, which is traceable to recognized national standards.

2.4. TEST FACILITY

The 3&10m test site and conducted measurement facility used to collect the radiated data are located at the 42, Yurim-ro, 154beon-gil, Cheoin-gu, Yongin-si, Gyeonggi-do, Korea 449-935. The site is constructed in conformance with the requirements.

- 3&10m test site registration Number: 678747

3. DESCRIPTION OF TESTS

3.1 ERP&EIRP

(Effective Radiated Power & Equivalent Isotropic Radiated Power)

Test Set-up

Test Procedure

- ANSI/TIA-603-C-2004 - Section 2.2.17
- KDB971168 v02r02 - Section 5.2.1

These measurements were performed at 3 & 10 m test site. The equipment under test is placed on a non-conductive table 0.8-meters above a turntable which is flush with the ground plane and 3 meters from the receive antenna.

Test setting

1. Set span to at least 1.5 times the OBW.
2. Set RBW = 1-5 % of the OBW, not to exceed 1 MHz.
3. Set VBW $\geq 3 \times$ RBW.
4. Set number of points in sweep $\geq 2 \times$ span / RBW.
5. Sweep time = auto couple.
6. Detector = RMS (power averaging).
7. If the EUT can be configured to transmit continuously (i.e., burst duty cycle $\geq 98\%$), then set the trigger to free run.
8. If the EUT cannot be configured to transmit continuously (i.e., burst duty cycle $< 98\%$), then use a sweep trigger with the level set to enable triggering only on full power bursts and configure the EUT to transmit at full power for the entire duration of each sweep.
Ensure that the sweep time is less than or equal to the transmission burst duration.
9. Trace average at least 100 traces in power averaging (i.e., RMS) mode.
10. Compute the power by integrating the spectrum across the OBW of the signal using the instrument's band power measurement function, with the band limits set equal to the OBW band edges. If the instrument does not have a band power function, then sum the spectrum levels (in linear power units) at intervals equal to the RBW extending across the entire OBW of the spectrum.

The receive antenna height and turntable rotations were adjusted for the highest reading on the receive spectrum analyzer.

A half-wave dipole was substituted in place of the EUT. This dipole antenna was driven by a signal generator and the level of the signal generator was adjusted to obtain the same receive spectrum analyzer reading. The conducted power at the terminal of the substitute antenna is measured.

The ERP/EIRP is calculated using the following formula:

ERP/EIRP = The conducted power at the substitute antenna's terminal [dBm] + Substitute Antenna gain [dBd for ERP , dBi for EIRP]

For readings above 1 GHz, the above procedure is repeated using horn antennas and the difference between the gain of the horn antenna and an isotropic antenna are taken into consideration.

3.2 PEAK TO AVERAGE RATIO

Test set-up

Test Procedure

- KDB971168 v02r02 - Section 5.7.1

A peak to average ratio measurement is performed at the conducted port of the EUT. The spectrum analyzers Complementary Cumulative Distribution Function (CCDF) measurement profile is used to determine the largest deviation between the average and the peak power of the EUT in a given bandwidth. The CCDF curve shows how much time the peak waveform spends at or above a given average power level. The present of time the signal spends at or above the level defines the probability for that particular power level.

Test setting

The spectrum Analyzer's CCDF measurement function is enabled.

1. Set resolution/measurement bandwidth $\geq$ signal's occupied bandwidth.
2. Set the number of counts to a value that stabilizes the measured CCDF curve
3. Set the measurement interval as follows:
 - 1) For continuous transmissions, set to 1 ms.
 - 2) For burst transmissions, employ an external trigger that is synchronized with the EUT burst timing sequence, or use the internal burst trigger with a trigger level that allows the burst to stabilize and set the measurement interval to a time that is less than or equal to the burst duration.
4. Record the maximum PAPR level associated with a probability of 0.1 %

3.3 OCCUPIED BANDWIDTH.

Test set-up

Test Procedure

- KDB971168 v02r02-Section 4.2

The occupied bandwidth, that is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power of a given emission.

Test setting

1. The signal analyzer's automatic bandwidth measurement capability was used to perform the 99 % occupied bandwidth and the 26 dB bandwidth. The bandwidth measurement was not influenced by any intermediate power nulls in the fundamental emission.
2. $RBW = 1 \sim 5 \%$ of the expected OBW & $VBW \geq 3 \times RBW$
3. Detector = Peak
4. Trance mode = Max hold
5. Sweep = Auto couple
6. The trace was allowed to stabilize
7. If necessary, step 2 ~ 6 were repeated after changing the RBW such that it would be within $1 \sim 5 \%$ of the 99 % occupied bandwidth observed in step 6.

3.4 BAND EDGE EMISSIONS (Conducted)

Test set-up

Test Procedure

- KDB971168 v02r02 - Section 6.0

All out of band emissions are measured by means of a calibrated spectrum analyzer. The EUT was setup to maximum output power at its lowest and highest channel with all bandwidths, modulations and RB configurations.

The power of any spurious emission shall be attenuated below the transmitter power (P) by at least $43 + 10 \log(P)$ dB or requirements on note 2 in case of band 7 and 41.

Test setting

1. Start and stop frequency were set such that the band edge would be placed in the center of the plot
2. Span was set large enough so as to capture all out of band emissions near the band edge
3. RBW ≥ 1 % of the emission bandwidth or 2 % of the emission bandwidth (refer to note 2)
4. VBW $\geq 3 \times$ RBW
5. Detector = RMS & Trace mode = Max hold
6. Sweep time = Auto couple or 1 s for band edge
7. Number of sweep point $\geq 2 \times$ span / RBW
8. The trace was allowed to stabilize

Note 1: In the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of **at least one percent** of the emission bandwidth of the fundamental emission of the transmitter may be employed to demonstrate compliance with the out-of-band emissions limit. The emission bandwidth is defined as the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, outside of which all emission are attenuated at least 26 dB below the transmitter power.

Note 2: For part 27.53(m)(4) the attenuation factor shall be not less than $40 + 10 \log(P)$ dB on all frequencies between the channel edge and 5 MHz from the channel edge, $43 + 10 \log(P)$ dB on all frequencies between 5 MHz and X MHz from the channel edge, and $55 + 10 \log(P)$ dB on all frequencies more than X MHz from the channel edge, where X is the greater of 6 MHz or the actual emission bandwidth as defined in paragraph (m)(6) of this section. In addition, the attenuation factor shall not be less that $43 + 10 \log(P)$ dB on all frequencies between 2490.5 MHz and 2496 MHz and $55 + 10 \log(P)$ dB at or below 2490.5 MHz. For mobile digital stations, in the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of **at least two percent** may be employed, except when the 1 MHz band is 2495-2496 MHz, in which case a resolution bandwidth of **at least one percent** may be employed.

3.5 SPURIOUS AND HARMONIC EMISSIONS (Conducted)

Test set-up

Test Procedure

- KDB971168 v02r02- Section 6.0

The level of the carrier and the various conducted spurious and harmonic frequencies is measured by means of a calibrated spectrum analyzer. The EUT was setup to maximum output power at its low, middle, high channel with all bandwidths, modulations and RB configurations. The spectrum is scanned from 30 MHz up to a frequency including its 10th harmonic.

The power of any spurious emission shall be attenuated below the transmitter power (P) by at least $43 + 10 \log(P)$ dB or $55 + 10 \log(P)$ in case of band 7 and 41.

Test setting

1. RBW = 100 KHz or 1 MHz & VBW $\geq 3 \times$ RBW (Refer to Note 1)
2. Detector = RMS & Trace mode = Max hold
3. Sweep time = Auto couple
4. Number of sweep point $\geq 2 \times$ span / RBW
5. The trace was allowed to stabilize

Note 1: Compliance with these provisions is based on the use of measurement instrumentation employing a resolution bandwidth of 100 kHz or greater for Part 22 and 1 MHz or greater for Part 24, 27.

3.6 UNDESIRABLE EMISSIONS (Radiated)

Test Set-up

Test Procedure

- ANSI/TIA-603-C-2004 - Section 2.2.12
- KDB971168 v02r02 - Section 5.8

These measurements were performed at 3 & 10m test site. The equipment under test is placed on a non-conductive table 0.8-meters above a turntable which is flush with the ground plane and 3 meters from the receive antenna.

Test setting

1. RBW = 100 kHz for below 1 GHz and 1 MHz for above 1 GHz / VBW $\geq 3 \times$ RBW
2. Detector = Peak & Trace mode = Max hold
3. Sweep time = Auto couple
4. Number of sweep point $\geq 2 \times$ span / RBW
5. The trace was allowed to stabilize

The receive antenna height and turntable rotations were adjusted for the highest reading on the receive spectrum analyzer.

For radiated power measurements below 1 GHz, a half-wave dipole was substituted in place of the EUT. This dipole antenna was driven by a signal generator and the level of the signal generator was adjusted to obtain the same spectrum analyzer reading.

For radiated power measurements above 1 GHz, a Horn antenna was substituted in place of the EUT. This Horn antenna was driven by a signal generator and the level of the signal generator was adjusted to obtain the same spectrum analyzer reading. The difference between the gain of the horn and an isotropic antenna are taken into consideration.

This measurement was performed with the EUT oriented in 3 orthogonal axis.

3.7 FREQUENCY STABILITY

Test Set-up

Test Procedure

- ANSI/TIA-603-C-2004
- KDB971168 v02r02 - Section 9.0

The frequency stability of the transmitter is measured by:

a.) Temperature:

The temperature is varied from - 30 °C to + 50 °C using an environmental chamber.

b.) Primary Supply Voltage:

The primary supply voltage is varied from 85 % to 115 % of the nominal value for non hand-carried battery and AC powered equipment. For hand-carried, battery-powered equipment, primary supply voltage is reduced to the battery operating end point which shall be specified by the manufacturer.

Specification:

The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block for Part 24. The frequency stability of the transmitter shall be maintained within $\pm 0.00025\%$ (± 2.5 ppm) of the center frequency for Part 22.

Time Period and Procedure:

1. The carrier frequency of the transmitter is measured at room temperature.
(25 °C to provide a reference)
2. The equipment is turned on in a "standby" condition for one minute before applying power to the transmitter. Measurement of the carrier frequency of the transmitter is made within one minute after applying power to the transmitter.
3. Frequency measurements are made at 10 °C intervals ranging from -30 °C to +50 °C.
A period of at least one half-hour is provided to allow stabilization of the equipment at each temperature level.

5. SUMMARY OF TEST RESULTS

FCC Part Section(s)	Test Description	Test Limit	Test Condition	Status Note 1
2.1046	Conducted Output Power	N/A	Conducted	C ^{Note 2}
2.1049	Occupied Bandwidth	N/A		C
24.232(d)	Peak to Average Ratio	< 13 dB		C
2.1051 22.917(a)	Band Edge / conducted Spurious Emissions	< 43 + 10log ₁₀ (P) dB at Band edge and for all out-of-band emissions		C
2.1055 22.355	Frequency Stability	< 2.5 ppm (Part 22) Fundamental emissions must stay within Authorized frequency block (Part 24, 27)		C
22.913(a.2)	Effective radiated power	< 7 Watts max. ERP	Radiated	C ^{Note 3}
2.1053 22.917(a)	Undesirable Emissions	< 43 + 10log ₁₀ (P) dB at Band edge and for all out-of-band emissions		C ^{Note 3}
Note 1: C=Comply NC=Not Comply NT=Not Tested NA=Not Applicable				
Note 2: Refer to RF Exposure Report (Test Report_SAR)				
Note 3: There is no normal battery cover and there is only one kind of wireless charging battery cover for this handset. So per KDB 648474 D03 v01r02, the spurious emissions were tested with the wireless charging battery cover and with both not charging and charging conditions. Also ERP,EIRP tests were repeated with the wireless charging condition at the worst case configuration of the not charging condition. For wireless charging condition, the handset is placed on the representative charging pad under normal conditions and in a simulated call configuration.				

The sample was tested according to the following specification:

ANSI/TIA/EIA-603-C-2004 and KDB 971168 D01 v02r02, KDB 648474 D03 v01r02

6. SAMPLE CALCULATION

A. Emission Designator

LTE Band (QPSK)

Emission Designator = **8M94G7D**

LTE OBW = 8.944 MHz

G = Phase Modulation

7 = Quantized/Digital Info

D = Data Transmission

LTE Band (16QAM)

Emission Designator = **8M97W7D**

LTE OBW = 8.968 MHz

W = Amplitude/Angle Modulated

7 = Quantized/Digital Info

D = Data Transmission

7. TEST DATA

7.1 OCCUPIED BANDWIDTH

- Plots of the EUT's Occupied Bandwidth are shown in Clause 8.1

7.2 PEAK TO AVERAGE RATIO

- Plots of the EUT's Peak- to- Average Ratio are shown in Clause 8.2

7.3 BAND EDGE EMISSIONS (Conducted)

- Plots of the EUT's Band Edge Emissions are shown in Clause 8.3

7.4 SPURIOUS AND HARMONICS EMISSIONS (Conducted)

- Plots of the EUT's Spurious Emissions are shown in Clause 8.4

7.5 EQUIVALENT ISOTROPIC RADIATED POWER

				2544.15	Y	H	-57.69	7.59	-50.10	68.54	
				6784.24	Y	H	-45.35	9.59	-35.76	54.20	

Note 1: Limit Calculation = $43 + 10\log_{10}(P[\text{Watts}])$

Note 2: This device was tested under all bandwidths, modulations and RB configurations and the worst case data are reported in the table above.

Note 3: The frequency spectrum is examined from 9 kHz to the 10th harmonic of the fundamental frequency of the transmitter. No other spurious and harmonic emissions were reported greater than listed emissions above table.

7.6.2 LTE Band 5 / Without Wireless Charging

B.W (MHz)	Test Freq. (MHz)	RB Offset/ Size	Test Mode	Freq.(MHz)	EUT Axis	Ant Pol (H/V)	Level(dBm) @ Ant Terminal	TX Ant Gain(dBi)	Result		Limit (dBc)

8. TEST PLOTS

Note: All bandwidths, RB configurations, and modulations were investigated. The worst case test results are reported below.

8.1 OCCUPIED BANDWIDTH

8.1.1 LTE Band 5

LTE Band 5 / 10MHz / QPSK - RB Size 50

LTE Band 5 / 10MHz / 16QAM - RB Size 50

LTE Band 5 / 5MHz / QPSK - RB Size 25

LTE Band 5 / 5MHz / 16QAM - RB Size 25

LTE Band 5 / 3MHz / QPSK - RB Size 15

LTE Band 5 / 3MHz / 16QAM - RB Size 15

LTE Band 5 / 1.4MHz / QPSK - RB Size 6

LTE Band 5 / 1.4MHz / 16QAM - RB Size 6

8.2 PEAK TO AVERAGE RATIO

8.2.1 LTE Band 5

LTE Band 5 / 10MHz / QPSK - RB Size 50

LTE Band 5 / 10MHz / 16QAM - RB Size 50

LTE Band 5 / 5MHz / QPSK - RB Size 25

LTE Band 5 / 5MHz / 16QAM - RB Size 25

LTE Band 5 / 3MHz / QPSK - RB Size 15

LTE Band 5 / 3MHz / 16QAM - RB Size 15

LTE Band 5 / 1.4MHz / QPSK - RB Size 6

LTE Band 5 / 1.4MHz / 16QAM - RB Size 6

8.3 BAND EDEG EMISSIONS(Conducted)

8.3.1 LTE Band 5

- Lower Band Edge

LTE Band 5 / 10MHz / QPSK - RB Offset/Size (0/25)

- Lower Extended Band Edge

LTE Band 5 / 10MHz / QPSK - RB Offset/Size (0/25)

- Upper Band Edge

LTE Band 5 / 10MHz / QPSK - RB Offset/Size (25/25)

- Upper Extended Band Edge

LTE Band 5 / 10MHz / QPSK - RB Offset/Size (0/50)

- Lower Band Edge

LTE Band 5 / 5MHz / 16QAM Offset/Size (0/1)

- Lower Extended Band Edge

LTE Band 5 / 5MHz / QPSK Offset/Size (0/25)

- Upper Band Edge

LTE Band 5 / 5MHz / 16QAM - RB Offset/Size (24/1)
