Att.: To whom it may concern

30 November 2018

Hereby DALI informs that Kleernet radio module FCC ID: ZUC-DWAM83TB is region specific configured at the factory during the production assembly process.

USA and Canada products are permanently hardwired to only operate in the 5725 – 5850 MHz frequency band.

The change of the frequency band configuration cannot be performed without making a hardware modification to the product which cannot be done without confidential technical and product specific knowledge.

Non USA / Canada frequency band configurations will never be marketed or sold anywhere in the world with the FCC identifier and or the Canadian certification number on the label.

Best regards  
**DALI A/S**
